Free radicals have been implicated in an entire host of different human disease states, which suggests that although they may not have a pivotal causal role, they are involved in the perpetuation of disease. In recent years, it has become evident that although free radicals most certainly do have this role in perpetuating inflammatory reactions, they have perhaps a far more important role in acting as second messenger systems to maintain normal cell function. It is the perturbations of these reactions which pose the most intriguing therapeutic challenges. This volume deals with various basic mechanisms of free radical processes and injury. The emphasis in each case is on potential therapeutic strategies developing from this new knowledge.

This book addresses a wide range of basic and clinical issues in the physiology and pharmacology of growth hormone. The volume is organized like a textbook. It begins with factors contributing to GH gene expression, the functional relationships of the GH receptor, molecular biological analysis of the GH-GH receptor complex and proceeds to describe the insulin-like growth factor axis. Transgenic models are discussed for analysis of discrete effects. These discussions provide a bridge to clinically oriented discussions of growth abnormalities in GH deficient children, GH insensitivity due to deficiency of the GH receptor, and the concept of aging as a GH/IGF-I deficiency state. Discussions also include the immune system as a source and a responder to GH, GHRH, IGF-I and the effects of GH excess.

Individual Development and Social Change: Explanatory Analysis represents a convergence of three lines of emphasis now visible in developmental research and theory building. The three are (1) the life course as a focus for the study of development and social change, and their interrelationships; (2) the life-span orientation to the study of individual development, with its acknowledgment of the salience of contextual features for understanding development; and (3) the growth of methodological innovations that provide more appropriate and powerful ways of exploiting data gathered to describe and explain developmental change processes. The book opens with a study on how major cultural change originates and unfolds over time. This is followed by separate chapters on the use of sequential designs for explanatory analyses; evolutionary aspects of social and individual development; the concepts of the theory of causal and weak

causal regressive dependence; and the concepts of age, period, and cohort from the perspective of developmental psychology. Subsequent chapters examine development and aging as lifelong processes of historical populations; the methodological integration of natural and cultural science perspectives in developmental psychology; and application of the multifaceted methodology to the mutuality of constraint between sociocultural group and individual dynamics.

Refreshing and revealing in equal measure, this innovative volume conducts a critical/self-critical exploration of the impact of culture on the ill-fated Oslo peace process. The authors negotiators and scholars alike demolish stereotypes as they construct an unusually subtle and sophisticated understanding of how culture influences negotiating styles. Culture, they argue, did not cause the Oslo breakdown but it did play an influential, intervening role at several levels: coloring the thinking of political leaders, shaping domestic politics on both sides, and affecting each side's evaluation of the other's beliefs and intentions. After an overview by William Quandt of the history of the Oslo process and the impact of international factors such as U.S. mediation, the volume presents a detailed analysis of first Palestinian, and then Israeli negotiating styles between 1993 and 2001. Omar Dajani, a former legal advisor to the Palestinian team, explains how elements of Palestinian identity and national development have hobbled the Palestinians ability to negotiate effectively. Aharon Klieman, a distinguished Israeli analyst, traces a long-standing clash between diplomatic and security subcultures within the Israeli political elite and reveals how Israeli identity has helped create a negotiating style that opts for short-term gains while undermining the prospects for a lasting agreement. Drawing on these insights, Tamara Wittes concludes the volume by offering not only a fresh appreciation of culture's influence on interethnic negotiations but also lessons for future negotiators in the Israeli-Palestinian conflict. This book gives a rigorous treatment of selected topics in classical analysis, with many applications and examples. The exposition is at the undergraduate level, building on basic principles of advanced calculus without appeal to more sophisticated techniques of complex analysis and Lebesgue integration. Among the topics covered are Fourier series and integrals, approximation theory, Stirling's formula, the gamma function, Bernoulli numbers and polynomials, the Riemann zeta function, Tauberian theorems, elliptic integrals, ramifications of the Cantor set, and a theoretical discussion of differential equations including power series solutions at regular singular points, Bessel functions, hypergeometric functions, and Sturm comparison theory. Preliminary chapters offer rapid reviews of basic principles and further background material such as infinite products and commonly applied inequalities. This book is designed for individual study but can also serve as a text for second-semester courses in advanced calculus. Each

chapter concludes with an abundance of exercises. Historical notes discuss the evolution of mathematical ideas and their relevance to physical applications. Special features are capsule scientific biographies of the major players and a gallery of portraits. Although this book is designed for undergraduate students, others may find it an accessible source of information on classical topics that underlie modern developments in pure and applied mathematics.
