An unflinching and intelligent alternative history of the twentieth century that provides a provocative vision of Europe's past, present, and future. "[A] splendid book." —The New York Times Book Review Dark Continent provides an alternative history of the twentieth century, one in which the triumph of democracy was anything but a forgone conclusion and fascism and communism provided rival political solutions that battled and sometimes triumphed in an effort to determine the course the continent would take. Mark Mazower strips away myths that have comforted us since World War II, revealing Europe as an entity constantly engaged in a bloody project of self-invention. Here is a history not of inevitable victories and forward marches, but of narrow squeaks and unexpected twists, where townships boast a bronze of Mussolini on horseback one moment, only to melt it down and recast it as a pair of noble partisans the next.

George Katsiaficas's account covers the period 1968-1996 and pays special attention to the role of autonomous feminist movements, the effects of squatters and feminists on the disarmament movement and on efforts to shut down nuclear power, and the antifascist social movements developed in response to the neo-Nazi upsurge. In addition to providing a rare depiction of these often overlooked movements, Katsiaficas develops a specific notion of autonomy from the statements and aspirations of these movements. Drawing from the practical actions of social movements, his analysis is extended into a universal standpoint of the species, a perspective he develops by uncovering the partiality of Antonio Negri's workerism, Seyla Benhabib's feminism, and notions of uniqueness of the German nation.

This book is open access under a CC BY-NC 2.5 license. On April 22, 1915, the German military released 150 tons of chlorine gas at Ypres, Belgium. Carried by a long-awaited wind, the chlorine cloud passed within a few minutes through the British and French trenches, leaving behind at least 1,000 dead and 4,000 injured. This chemical attack, which amounted to the first use of a weapon of mass destruction, marks a turning point in world history. The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber, the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin-Dahlem. During World War I, Haber transformed his research institute into a center for the development of chemical weapons (and of the means of protection against them). Bretislav Friedrich and Martin Wolf (Fritz Haber Institute of the Max Planck Society, the successor institution of Haber's institute) together with Dieter Hoffmann, Jürgen Renn, and Florian Schmaltz (Max Planck Institute for the History of Science) organized an international symposium to commemorate the centenary of the infamous chemical attack. The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence. The focus was on scientific, ethical, legal, and political issues of chemical weapons research and deployment — including the issue of dual use — as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination. The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015.

What is fascism? By focusing on the concrete: what the fascists did, rather than what they said, the esteemed historian Robert O. Paxton answers this question. From the first violent uniformed bands beating up "enemies of the state," through Mussolini's rise to power, to Germany's fascist radicalization in World War II, Paxton shows clearly why fascists came to power in some countries and not others, and explores whether fascism could exist outside the early-twentieth-century European setting in which it emerged. "A deeply intelligent and very readable book. . . . Historical analysis at its best." —The Economist The Anatomy of Fascism will have a lasting impact on our understanding of modern European history, just as Paxton's classic Vichy France redefined our vision of World War II. Based on a lifetime of research, this compelling and important book transforms our knowledge of fascism — "the major political innovation of the twentieth century, and the source of much of its pain."

"Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the

limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-pressure suits, from the earliest models to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space."--NTRS Web site.

This book provides a detailed introduction to how the Lander (the 16 states of Germany) function not only within the country itself but also within the wider context of European political affairs. Some knowledge of the role of the Lander is essential to an understanding of the political system as well as of German federalism. This book traces the origin of the Lander. It looks at their place in the constitutional order of the country and the political and administrative system. Their organization and administration are fully covered, as is their financing. Parties and elections in the Lander and the controversial roles of parliaments and deputies are also examined.
