Henry Ford's Model T forever changed the world. The car made "for the great

multitude" (as Ford put it) first debuted in 1908 and proved so affordable and so popular that fifteen million were sold through 1927. The "Tin Lizzie" was the first automobile to be mass-produced on moving assembly lines, and built using interchangeable parts. It proved tough and reliable

in everyday use, and cheap enough to spawn the automobile revolution: the car cost \$850 in 1909 but amazingly by the 1920s, the price had dropped to a mere \$260 due to the perfection of production techniques and economy of scale. Designed by a team that included Childe Harold Willis, Joseph

Galamb and Eugene Farkas, the Model T had a front-mounted four-cylinder engine that produced 20 hp and had a top speed of 45 mph. It was a rear-wheel drive vehicle with wooden wheels, and featured a two-speed transmission plus a reverse gear. Although models varied - and many revisions took place over two

decades of production - the original version weighed about 1200 pounds. Created in the 1920s and featuring information about the original Model T and the "New Model T" of 1925, this maintenance manual is an invaluable resource. It was originally intended to educate the men tasked with

assembling,
repairing and

Model T, and offers

Recommendations on the Transport of

Dangerous Goods

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of

chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or

the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in

the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Information is also given concerning the use of certain supplies which are for the purpose of helping to keep well. This field manual addresses wounds, fractures/d islocations/ sprains, common emergencies and health measures, effects of severe cold and heat, measures for use in the jungle/tropics and in aircraft and

The anchored systems discussed include

flexible anchored walls, slopes supported using ground anchors, landslide stabilization systems, and structures that incorporate tiedown anchors. This book draws extensively in describing issues such as subsurface investigation and laboratory testing, basic anchoring principles, ground anchor load testing, and inspection of

construction materials and methods used for anchored systems. This book provides detailed information on design analyses for ground anchored systems. Topics discussed include selection of design earth pressures, ground anchor design, design of corrosion protection system for ground anchors, design of wall components to resist lateral and vertical loads, evaluation of overall anchored system stability, and seismic design of anchored systems. Also included in this book are two detailed design examples and technical specifications for ground anchors and for anchored walls.
