Penguin

Packed with more than a hundred marvelous motorbikes, this revved-up collection will delight the motorcycle enthusiast. Expert author Hugo Wilson has loaded the book with the most exceptional machines ever to rule the roads. Superb, museum-quality photography and a clean and classic DK layout showcases each machine, while the text celebrates the appeal of each and every brilliant bike in the book. Test drive this essential visual history of the motorbike and you'll want to take it home.

Jane's Surface Skimmers Causey Enterprises, LLC Contains full-color photographs and descriptions of approximately one hundred Harley Davidson motorcycles produced since 1903.

This updated book of instructions explains the

right way to install an inexpensive, dependable, and smooth-running automobile engine in an experimental aircraft. Finally spelled out for the aviation hobbyist are such considerations as: -- Simple but effective cooling systems -- Dependable drive units -- Strong, safe, and light engine mounts -- The latest fuel and ignition systemsThe author also identifies which companies manufacture conversion kits that are safe and dependable.

The Commercial Motor Elsevier

Contains current information on hovercraft and hydrofoils.

This is the story of how private foreign enterprise in the form of Swedish Lloyd and Swedish America Line, who formed a British company called 'Hoverlloyd', galvanised the British Government in to supporting this new concept in transport through the formation of a British Rail subsidiary called 'Seaspeed'.

Aviation News Motorbooks International Aircraft Performance: An Engineering Approach introduces flight performance analysis techniques that enable readers to determine performance and flight capabilities of aircraft. Flight performance analysis for prop-driven and jet aircraft is explored, supported by examples and illustrations, many in full color. MATLAB programming for performance analysis is included, and coverage of modern aircraft types is emphasized. The text builds a strong foundation for advanced coursework in aircraft design and performance analysis. Hot Bikes Causey Enterprises, LLC Combustion and Heat Transfer in Gas Turbine Systems is a compilation of papers from the Proceedings of an International Propulsion Symposium held at the College of Aeronautics, Cranfield in April 1969. This compilation deals with research done by academic and scientific institutions and of industrial organizations, with some research papers covering atomization, fuels, and high-temperature materials. One paper describes the combustion system of the Concorde engine used in commercial flights, temperature of metal parts, and

some design modifications to increase the mechanical life of the combustion system. Another paper discusses the evolution of the RB 162 combustion system that is used in the vertical takeoff and landing aircrafts. The RB 162 has many design features of the earlier single reversal chamber and differs in only one or two points. The book then notes the necessity of a plenum chamber burning to further development of supersonic engines and flight. One paper also proposes an alternative theory to the traditional ignition theory of altitude relighting such as those developed by Lewis and von Elbe. Another paper reposts on some observations made of the atomizing characteristics of air-blast atomizers and proposes simple changes to improve the performance of the atomizer by prefilming and allowing air to both sides of the fuel. This compilation will prove very helpful for aeronautical engineers, aviation designers, physicists, students of engineering, and readers who are interested in the design and development of jet engines and supersonic aircrafts.
