In contrast to the great diversity of other crime and delinquency research measures, those drawn from the CPI and the MMPI have much in common. They are taken from standardized instruments administered under controlled conditions, with known stimulus properties and validity indicators. The CPI and MMPI measures will frequently be instruments of choice in research on personality and psychodynamics of offenders. CHAPTER 6 Law Enforcement and Police This chapter encompasses a variety of scales that refer to law enforcement or police agencies. Unfortunately, in the case of many scales, these terms are used simply with the assumption that the respondents understand the concepts and use them in the same way as

researchers. In other cases, however, specific policing functions are identified and described.

As noted in Chapter 3, a standard order of scale presentation is followed. First the attitudes scales are presented, followed by the behavior ratings, personality measures, milieu ratings, prediction measures and finally the very broad category of description. After the reviews are completed within each subcategory, other scales in that category are listed. (See Chapter 2 for a description of the criteria that were used in deciding upon whether a scale would be reviewed or simply listed. ) Listed scales are presented by title and bibliographic reference, followed by a very brief description.

Emotionally charged issues abound in matrimonial practice, especially in custody disputes. Expert testimony can have a dramatic impact on the outcome of a case, and when matters are highly sensitive or sensational the seeming objectivity of an expert can be dispositive. To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving. Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' Psychological Experts in Divorce Actions pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D., and Andrew W. Kane, Ph.D., are licensed psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience—testing parties to a divorce and treating psychological patients in the clinic—and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers can readily apply. They also examine vital issues including: Ethics —confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse —bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing —personality tests (including MMPI-2, And The new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS, BPS); and many more How divorce affects families —custody, placement, age and gender differences, grandparents, sexual preference, psychological problems
