What does it mean to be fully alive? Magic blends with reality in a stunning coming-of-age novel about a girl, a grandfather, wanderlust, and reclaiming your roots. Things are only impossible if you stop to think about them. . . . While her friends are spending their summers having pool parties and sleepovers, twelve-year-old Carolina — Carol — is spending hers in the middle of the New Mexico desert, helping her parents move the grandfather she's never met into a home for people with dementia. At first, Carol avoids prickly Grandpa Serge. But as the summer wears on and the heat bears down, Carol finds herself drawn to him, fascinated by the crazy stories he tells her about a healing tree, a green-glass lake, and the bees that will bring back the rain and end a hundred years of drought. As the thin line between magic and reality starts to blur, Carol must decide for herself what is possible — and what it means to be true to her roots. Readers who dream that there's something more out there will be enchanted by this captivating novel of family, renewal, and

discovering the wonder of the world.

Why Photography Matters as Art as Never Before

From the late 1970s onward, serious art photography began to be made at large scale and for the wall. Michael Fried argues that this immediately compelled photographers to grapple with issues centering on the relationship between the photograph and the viewer standing before it that until then had been the province only of painting. Fried further demonstrates that certain philosophically deep problems—associated with notions of theatricality, literalness, and objecthood, and touching on the role of original intention in artistic production, first discussed in his controversial essay “ Art and Objecthood ”

(1967)—have come to the fore once again in recent photography. This means that the photographic “ ghetto ” no longer exists; instead photography is at the cutting edge of contemporary art as never before. Among the photographers and video-makers whose work receives serious attention in this powerfully argued book are Jeff Wall, Hiroshi Sugimoto, Cindy Sherman, Thomas Struth,

Thomas Ruff, Andreas Gursky, Luc Delahaye, Rineke Dijkstra, Patrick Faigenbaum, Roland Fischer, Thomas Demand, Candida Höfer, Beat Streuli, Philip-Lorca diCorcia, Douglas Gordon and Philippe Parreno, James Welling, and Bernd and Hilla Becher. Future discussions of the new art photography will have no choice but to take a stand for or against Fried's conclusions.

The Panel on Juvenile Crime: Prevention, Treatment, and Control convened a workshop on October 2, 1998, to explore issues related to educational performance, school climate, school practices, learning, student motivation and commitment to school, and their relationship to delinquency. The workshop was designed to bring together researchers and practitioners with a broad range of perspectives on the relationship between such specific issues as school safety and academic achievement and the development of delinquent behavior. Education and Delinquency reviews recent research findings, identifies gaps in knowledge and promising areas of future research, and discusses the need for program evaluation and the integration

of empirical research findings into program design.

The Temple of Glas takes the form of an elusive and suspenseful-but for that reason all the more

sensational-dream vision that demands close attention to detail and the dynamic way in which the meaning of events unfolds. Seducing readers with possibilities remains what the poem does best, and that special magnetism speaks not only to the provenance and textual history of Lydgate's text but also to its literary qualities.

Biology of Parasitism is based on the Biology of Parasitism Course at the Marine Biological Laboratory in Woods Hole, Massachusetts. Having just celebrated its 20th offering, this Course has distinguished itself as the premier, world-renowned training ground for future generations of parasitologists. The primary goal of the Course is to attract and introduce the very best and most promising young researchers to the many unresolved problems in parasitology and prepare them for their future as independent investigators in the field. The rigorous program combines state-of-the-art laboratory research

with a program of visiting lecturers who bring together the most current research in the field. Since at this time there are no academic institutions that have enough depth in parasitology research or teaching faculty to provide up-to-date and state-of-the-art training, the Course has become, and will remain, a global resource for providing intensive education in modern parasitology. Biology of Parasitism is intended to present a snapshot of the content and spirit of the Biology of Parasitism Course. By presenting a series of chapters that reflect the formal lectures that students receive on a daily basis, as well as the approaches used during the laboratory section of the Course, the editors hope to share some of the science that occurs there. One part of the book presents the experimental component of the Course, in particular the subject matter of the four two-week sessions covering Immunology, Biochemistry, Cell Biology and Molecular Biology of protozoan and helminth parasites. As in the Course, the experimental part is complemented by a number of review-like chapters solicited from the large number of speakers who lecture during the Course.

At no other point in human history have the definitions of "woman" and "man," "male" and "female," "masculine" and "feminine," been

more contentious than now. This book advances a pragmatic approach to the act of defining that acknowledges the important ethical dimensions of our definitional practices. Increased transgender rights and visibility has been met with increased opposition, controversy, and even violence. Who should have the power to define the meanings of sex and gender? What values and interests are advanced by competing definitions? Should an all-boys' college or high school allow transgender boys to apply? Should transgender women be allowed to use the women's bathroom? How has growing recognition of intersex conditions challenged our definitions of sex/gender? In this timely intervention, Edward Schiappa examines the key sites of debate including schools, bathrooms, the military, sports, prisons, and feminism, drawing attention to the political, practical, and ethical dimensions of the act of defining itself. This is an important text for students and scholars in gender studies, philosophy, communication, and sociology. The past decade has witnessed an explosion of our knowledge on the structure, coding capacity and evolution of the genomes of the two DNA-containing cell organelles in plants: chloroplasts (plastids) and mitochondria. Comparative genomics analyses have provided new insights into the origin of organelles by endosymbioses and uncovered an enormous evolutionary dynamics of organellar genomes. In addition, they have greatly helped to clarify phylogenetic relationships, especially in algae and early land plants with limited morphological and anatomical diversity. This book, written by leading experts, summarizes our current knowledge about plastid and mitochondrial genomes in all major groups of algae and land plants. It also includes chapters on endosymbioses, plastid and mitochondrial mutants, gene expression profiling and methods for organelle transformation. The book is designed for students and researchers in plant molecular biology, taxonomy, biotechnology and evolutionary biology.
