G proteins are the key regulators for a wide

range of cellular processes in animals and plants. In comparison to animals and yeast, plants have a single Rho-GTPase subfamily called Rho-like GTPases (ROPs). The ROP family of monomeric GTPases has emerged as a versatile and key regulator in plant signal transduction processes. During the past few years' studies on plant RHO-type (ROP) GTPase have generated new insights into their role in diverse processes ranging from cytoskeletal organization, polar growth, development to stress and hormonal responses. Studies have shown that plants have evolved specific regulators and effector molecules. ROP GTPases possess the ability to interact with these multiple regulator and effector molecules that ultimately determines their signaling specificity. Recently, genome wide studies in plants have shown that the Arabidopsis genome encodes 93, and rice has nearly 85 small GTPase homologs. And we have been able to identify four new homologs in the rice genome. Here, we focus on the complete phylogenetic, domain, structural and expression analysis during stress and various developmental processes of small GTPases in plants. The comparison of gene expression patterns of the individual members of the GTPase family may help to reveal potential plant specific signaling mechanisms and their relevance. Also, we are summarizing the role of currently known ROP

GTPases and their interacting proteins with brief description, simultaneously, comparing their expression pattern based on microarray data. Overall, we will be discussing the functional genomic perspective of plant Rho like GTPases and their role in regulating several physiological processes such as stress, hormonal, pollen tube, root hair-growth and other developmental responses.?

"At a time when policing in America is at a crossroads, Barry Friedman provides much-needed insight, analysis, and direction in his thoughtful new book. *Unwarranted* illuminates many of the often ignored issues surrounding how we police in America and highlights why reform is so urgently needed. This revealing book comes at a critically important time and has much to offer all who care about fair treatment and public safety." —Bryan Stevenson, founder and Executive Director of the Equal Justice Initiative and author of *Just Mercy: A Story of Justice and Redemption* In June 2013, documents leaked by Edward Snowden sparked widespread debate about secret government surveillance of Americans. Just over a year later, the shooting of Michael Brown, a black teenager in Ferguson, Missouri, set off protests and triggered concern about militarization of law enforcement and discriminatory policing. In *Unwarranted*,

Barry Friedman argues that these two seemingly disparate events are connected—and that the problem is not so much the policing agencies as it is the rest of us. We allow these agencies to operate in secret and to decide how to police us, rather than calling the shots ourselves. And the courts, which we depended upon to supervise policing, have let us down entirely. *Unwarranted* tells the stories of ordinary people whose lives were torn apart by policing—by the methods of cops on the beat and those of the FBI and NSA. Driven by technology, policing has changed dramatically. Once, cops sought out bad guys; today, increasingly militarized forces conduct wide surveillance of all of us. Friedman captures the eerie new environment in which CCTV, location tracking, and predictive policing have made suspects of us all, while proliferating SWAT teams and increased use of force have put everyone's property and lives at risk. Policing falls particularly heavily on minority communities and the poor, but as *Unwarranted* makes clear, the effects of policing are much broader still. Policing is everyone's problem. Police play an indispensable role in our society. But our

failure to supervise them has left us all in peril. Unwarranted is a critical, timely intervention into debates about policing, a call to take responsibility for governing those who govern us.
