This book presents an analysis of the correlation between the mind and the body, a complex topic of study and discussion by scientists and philosophers. Drawing largely on neuroscience and philosophy, the author utilizes the scientific method and incorporates lessons learned from a vast array of sources. Based on the most recent cutting-edge scientific discoveries on the Mind-Body problem, Tomasi presents a full

examination of multiple fields related to neuroscience. The volume offers a scientist-based and student-friendly journey into medicine, psychology, artificial intelligence, embodied cognition, and social, ecological and anthropological models of perception, to discover our truest self.

Lakhmir Singh ' s Science for Class 8 Parkstone International

The navies of China, India and to a lesser extent Japan are expanding rapidly at present. This has the potential to alter the US-dominated naval balance in Asia-Pacific but it also raises a question: are the regions powers involved in a naval arms race? Naval development is and always has been a crucial indicator of economic and political development. It shows the emergence of a significant shift in strategic weight from West to East. But within the Asia-Pacific Region, alongside growing economic and institutional integration, there are geopolitical tensions that threaten the regions stability and peace. The balance between the two determines the form that naval development in that region is taking. Some aspects of this suggest the beginnings of a naval arms race that would have profound consequences for the region and the world.

The Algebra of Mohammed Ben Musa. Ed. and Transl. by Frederic Rosen Avichal Publishing Company

According to the defined canons of art technique, a portrait should be, above all, a faithful representation of its model. However, this gallery of 1000 portraits illustrates how the genre has been transformed throughout history, and has proven itself to be much more complex than a simple imitation of reality. Beyond exhibiting the skill of the artist, the portrait must surpass the task of imitation, as just and precise as it may be, to translate both the intention of the artist as well as that of its patron, without betraying either É's wishes. Therefore, these silent witnesses, carefully selected in these pages, reveal more than faces of historic figures or anonymous subjects: they reveal a psychology more than an identity, illustrate an allegory, serve as political and religious propaganda, and embody the customs of their epochs. With its impressive number of masterpieces, biographies, and commentaries on works, this book presents and analyses different portraits, consequently exposing to the reader, and to any art lover, a reflection of the evolution of society, and above all the upheavals of a genre that, over 300 centuries of painting, has shaped the history of art.
