Distance learning has become very popular in recent years, making evident some of the problems inherent to online classes as they are today. High attrition rates, driven in part by student isolation and low satisfaction, have plagued online courses. For an online class to succeed, it must be built upon engaging media and meaningful interaction. *Increasing Productivity and Efficiency in Online Teaching* provides a reference for educators in virtual classrooms and enumerates strategies to foster instructor engagement and support. Because co-construction of information, opposed to rote memorization of disseminated facts, engages students and develops critical thinking skills, online education must shift to reflect this. Drawing from learning theory, this publication focuses on the ways educators can shape their online classes to best suit their students and leave them with knowledge and course satisfaction. This book is recommended for researchers, developers, students of education, administrators, and online educators in all subject areas.

The digitization changes qualification demands of knowledge workers and opens new forms of collaboration. Solutions are required for enhancing acquisition and transfer of knowledge as well as training professional skills such as critical thinking, communication and cooperation. Peer Learning (PL) provides potentials for coping with these demands. However, it faces practical challenges as its reusability is low, collaboration expertise is required, and lacks leveraging digitization potentials. In contrast, the body of Collaboration Engineering (CE) literature, provides insights as it is an approach to designing collaborative work practices for high-value recurring tasks and deploying those to practitioners to execute for themselves without collaboration expertise. In this light, three research questions shape the structure of the thesis. First, the thesis shows an analysis of the application domain and develops a teaching-learning approach for creating conditions for PL in large scale lectures. Second, it proposes an approach to designing reference processes for enhancing PL. Third, it presents three studies that illustrate the design, instantiation and evaluation of reference processes for enhancing PL in the field. As methodological approach the thesis uses Design Science and develops, instantiates and evaluates re-usable reference processes for enhancing PL.

Substance use and substance use disorders (SUDs) have been documented in a number of cultures since the beginnings of recorded time and represent major societal concerns in the present day. The Oxford Handbook of Substance Use and Substance Use Disorders provides comprehensive reviews of key areas of inquiry into the fundamental nature of substance use and SUDs, their features, causes, consequences, course, treatment, and prevention. It is clear that understanding these various aspects of substance use and SUDs requires a multidisciplinary perspective that considers the pharmacology of drugs of abuse, genetic variation in these acute and chronic effects, and psychological processes in the context of the interpersonal and cultural contexts. Comprising two volumes, this Handbook also highlights a range of opportunities and challenges facing those interested in the basic understanding of the nature of these phenomena and novel approaches to assess, prevent, and treat these conditions with the goal of reducing the enormous burden these problems place on our global society. Chapters in Volume 1 cover the historical and cultural contexts of substance use and its consequences, its epidemiology and course, etiological processes from the perspective of neuropharmacology, genetics, personality, development, motivation, and the

interpersonal and larger social environment. Chapters in Volume 2 cover major health and social consequences of substance involvement, psychiatric comorbidity, assessment, and interventions. Each chapter highlights key issues in the respective topic area and raises unanswered questions for future research. All chapters are authored by leading scholars in each topic. The level of coverage is sufficiently deep to be of value to both trainees and established scientists and clinicians interested in an evidenced-based approach.
