Great Maritime Inventions 1833-1950 is a delightful look at how innovative Maritime ideas changed the world. Between 1833 and 1950, over 3,300 patents were granted to residents of New Brunswick, Nova Scotia and PEI. From the scuba tank to the variable pitch propeller to two-piece long underwear, Great Maritime Inventions profiles the best of the best. Included are inventions that are considered to be great advances in science, those that have substantially changed the course of development of technology, or those that have enjoyed a lasting success that can still be remembered or observed to this day. All of the inventions described in the book were completely novel in their day. Each patent is first in its classification, or else its claims are so broad that the intellectual property protection it gave covered every possible precursor. Before a patent was granted, an applicant had to declare that their invention was entirely new. Each application then underwent a thorough examination by expert examiners at the patent office. Each of the patents in Great Maritime Inventions were found to represent knowledge newly available to the public, and to be an important step forward in engineering or in developing consumer products that enhance our lives. Not all inventions were spectacular. In fact, many of these inventions never made it into the history books. It is only after fifty years or more that we realize the influence that every one of these inventions has had on our society. Each invention, large or small, was an important link in the chain of evolution of science and useful arts and has improved the way we live today.

The Automotive Transmission Book HarperCollins Australia

The Larrikin Kiwi Biker tells his story. In 1979 Graeme Crosby arrived in Britain with his worldly possessions in a carry-bag. His racing suit draped over his left shoulder, a scratched helmet in his right hand and just £ 150 in his wallet, he was ready to take on the world. I lifted up my cracked UV visor with my thumb. 'Which way does the track go and what's the lap record?' I called out over the noise of the valve gear rattling and clanging between my legs. the flag marshal's eyebrows raised in disbelief. I could see him muttering, 'And who the hell do you think you are - Mike Hailwood?' Four years later 'Croz', as he is affectionately known to millions of fans, walked away from the glamour of world championship Grand Prix racing, taking with him a bag full of trophies and his ever-present sense of humour. In that short time he had achieved more than most riders could ever hope for in a lifetime of racing. Become his pillion passenger as he takes you on a fast and furious journey from the grassroots of New Zealand motorcycle racing through Australia, Japan, the UK and Europe. Experience with him the crashes, the pain, the elation of winning and the international controversies. While the politics, boycotts and tragic fatalities make enthralling reading, the common thread is his determination to enjoy life and have fun. And win a few world championships.

This publication describes the theory and philosophy of military planning as practiced by the U.S. Marine Corps. The intent is to describe how we can prepare effectively for future action when the future is uncertain and unpredictable. In so doing, this publication provides all Marines a conceptual framework for planning in peace, in crisis, or in war. This approach to planning is based on our common understanding of the nature of war and on our warfighting philosophy of maneuver warfare as described in Marine Corps Doctrinal Publication (MCDP) 1, Warfighting.
