Electricity from renewable sources of energy is plagued by fluctuations (due to variations in wind strength or the intensity of insolation) resulting in a lack of stability if the energy supplied from such sources is used in 'real time'. An important solution to this problem is to store the energy electrochemically (in a secondary battery or in hydrogen and its derivatives) and to make use of it in a controlled fashion at some time after it has been initially gathered and stored. Electrochemical battery storage systems are the major technologies for decentralized storage systems and hydrogen is the only solution for long-term storage systems to provide energy during extended periods of low wind speeds or solar insolation. Future electricity grid design has to include storage systems as a major component for grid stability and for security of supply. The technology of systems designed to achieve this regulation of the supply of renewable energy, and a survey of the markets that they will serve, is the subject of this book. It includes economic aspects to guide the development of technology in the right direction. Provides state-of-the-art information on all of the storage systems together with an assessment of competing technologies Features detailed technical, economic and environmental impact information of different storage systems Contains information about the challenges that must be faced for batteries and hydrogen-storage to be used in conjunction with a fluctuating (renewable energy) power supply

The consequences of drug use, whether illicit or prescribed. Consequences that can be enduring, lifelong, even carry through generations. Yet few of us have the time to consider them as we live in the heat of our own daily lives. I have seen this in action, watched events while they happened, seen it unfold, lived through the results, and unfortunately am observing the ongoing calamities of it all, still today. It is not fun to watch but not mine to fix. I was and am an observer, a recorder, merely that, out of the action, incapable of altering the results. My wife made a great point on this novels subject. Drug use she said is a leveler. It brings people down the lowest common denominator. What a concept! How right on is that statement! Drugs affect the rich, the poor, the famous, and the infamous in every country and nationality on this earth. If you are on the upscale end drugs keep you there. The users life contribution to humanity is likely to be nothing, but the cost to the user, their family and friends in physical, emotional, and fiscal terms expensive and of course dangerous, because it may also kill you. I have put these observations into this novel hoping that readers can identify with the characters, watch them grow and suffer through the consequences of their actions unaware of the effect of their lives and on others.
