I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

Henry Lasoski, an officer in the Polish army, was there on the first day of World War II, thrusting his bayonet awkwardly into a German soldier hours after Hitler's army invaded his homeland in 1939. And Jacques Smith was there on the last, a member of the honor guard aboard the USS Missouri in Tokyo Bay when the Japanese signed the documents of surrender in 1945. From start to finish, this chronicle of fifty-three personal testimonies illuminates the Second World War in a way no mere accumulation of facts can. In a journalistic tour de force, Elizabeth Mullener over the course of twelve years found eyewitnesses to virtually every major event of World War II, and she found them all in one American city—New Orleans. Some are natives of the city and some are not, a testament to the upheaval of war and its power to scatter people around the globe. The people she writes about are not grand heroes or prime movers. They are young men shaking in their foxholes, young women stitching up wounded soldiers, and children facing a world gone topsy-turvy. And they saw it all. They witnessed the London Blitz and the siege of Stalingrad; the attack on Pearl Harbor and the Bataan Death March; the battle of Iwo Jima and the Nuremberg trials; the Normandy invasion and parties at the USO. Their memories are powerful. Harold Eck recalls sharks grazing his legs as he treaded water for four days after the USS Indianapolis sank in the Pacific Ocean. Anthony DeLucca saw bodies stacked like cordwood at Buchenwald. Christine Strevinsky slid a knife through the neck of a Nazi commandant at the age of nine. Frank Rosato played "The Missouri Waltz" for Harry Truman at Potsdam. All poignantly related through Mullener's graceful and compelling prose, the episodes in *War Stories*

provide an unusually intimate history of World War II and a direct, visceral connection to the central event of the twentieth century.

Escape the City is the perfect guide for people who live in the city or suburbs and want to move to the country. This is the "missing manual" that tells you absolutely everything you need to know on thousands of topics that you never even realized existed. Whether you're interested in shopping for a used tractor, starting garden seeds in a grow tent, logging your own trees, planting a berry patch, breeding sheep, arranging for firewood delivery, making ten gallons of hearty soup from a pig skeleton, installing solar electric power, or fighting invasive species, Escape the City has the information you need. There are endless books on gardening, farming, and homesteading. Why this book? * Other books don't have sufficient breadth. EtC covers absolutely everything related to living in the country. * Other books have blind spots about the basic stuff. Lakeland, the historical African American community of College Park, was formed around 1890 on the doorstep of the Maryland Agricultural College, now the University of Maryland, in northern Prince George's County. Located less than 10

miles from Washington, D.C., the community began when the area was largely rural and overwhelmingly populated by European Americans. Lakeland is one of several small, African American communities along the U.S. Route 1 corridor between Washington, D.C., and Laurel, Maryland. With Lakeland's central geographic location and easy access to train and trolley transportation, it became a natural gathering place for African American social and recreational activities, and it thrived until its self-contained uniqueness was undermined by the federal government's urban renewal program and by societal change. The story of Lakeland is the tale of a community that was established and flourished in a segregated society and developed its own institutions and traditions, including the area's only high school for African Americans, built in 1928.

The book provides the theoretical fundamentals on turbulence and a complete overview of turbulence models, from the simplest to the most advanced ones including Direct and Large Eddy Simulation. It mainly focuses on problems of modeling and computation, and provides information regarding the theory of dynamical systems and their bifurcations. It also examines turbulence aspects which are not treated in most existing books on this subject, such as turbulence in free and mixed convection, transient turbulence and transition to turbulence. The book adopts the tensor notation, which is the most appropriate to deal with intrinsically tensor quantities such as stresses and strain rates, and for those who are not familiar with it an Appendix on tensor algebra and tensor notation are provided.
