The use of statistics is fundamental to many endeavors in biology and geology. For students and professionals in these fields, there is no better way to build a statistical background than to present the concepts and techniques in a context relevant to their interests. Statistics with Applications in Biology and Geology provides a practical introduction to using fundamental parametric statistical models frequently applied to data analysis in biology and geology. Based on material developed for an introductory statistics course and classroom tested for nearly 10 years, this treatment establishes a firm basis in models, the likelihood method, and numeracy. The models addressed include one sample, two samples, one- and two-way analysis of variance, and linear regression for normal data and similar models for binomial, multinomial, and Poisson data. Building on the familiarity developed with those models, the generalized linear models are introduced, making it possible for readers to handle fairly complicated models for both continuous and discrete data. Models for directional data are treated as well. The emphasis is on parametric models, but the book also includes a chapter on the most important nonparametric tests. This presentation incorporates the use of the SAS statistical software package, which authors use to illustrate all of the statistical tools described. However, to reinforce understanding of the basic concepts, calculations for the simplest models are also worked through by hand. SAS programs and the data used in the examples and exercises are available on the Internet. [Geometry of the Standard Model of Elementary Particles](#) Wiley

The book gives an exposition of the standard model of elementary particles based on coordinate-free differential geometric foundations. It addresses students in physics and mathematics.

An examination of analysis and analysis practices for defense planning, the paper's purpose is to delineate priorities for the way ahead, i.e., for investments and other actions to ensure that future models and simulations will serve the needs of decisionmakers. The analysis in question is accomplished for Quadrennial Reviews and for continuing work on capability assessments, requirements analysis, and program analysis.

*Public History in a Postindustrial City* Macmillan

In the early nineteenth century, Lowell, Massachusetts, was widely studied and emulated as a model for capitalist industrial development. One of the first cities in the United States to experience the ravages of deindustrialization, it was also among the first places in the world to turn to its own industrial and ethnic history as a tool for reinventing itself in the emerging postindustrial economy. The Lowell Experiment explores how history and culture have been used to remake Lowell and how historians have played a crucial, yet ambiguous role in that process. The book focuses on Lowell National Historical Park, the flagship project of Lowell's new cultural economy. When it was created in 1978, the park broke new ground with its sweeping reinterpretations of labor, immigrant, and women's history.

Why, after several generations of suffrage and a revival of the women's movement in the late 1960s, do women continue to be less politically active than men? Why are they less likely to seek public office or join political organizations? The Private Roots of Public Action is the most comprehensive study of this puzzle of unequal participation. The authors develop new methods to trace gender differences in political activity to

the nonpolitical institutions of everyday life--the family, school, workplace, nonpolitical voluntary association, and church. Different experiences with these institutions produce differences in the resources, skills, and political orientations that facilitate participation--with a cumulative advantage for men. In addition, part of the solution to the puzzle of unequal participation lies in politics itself: where women hold visible public office, women citizens are more politically interested and active. The model that explains gender differences in participation is sufficiently general to apply to participatory disparities among other groups--among the young, the middle-aged, and the elderly or among Latinos, African-Americans and Anglo-Whites.

Reviews of this book: The Private Roots of Public Action begins with common explanations for the gender difference in participation, from domestic demands on women's time and psychic space through the effects of the patriarchal family, socioeconomic hierarchies, and political socialization...The results of [this] novel analysis are complex and interesting...The authors extend their model to examine the relationship between class, race or ethnicity, and political participation. This unique and accessible volume will be influential in the fields of political socialization and gender and politics. Strongly recommended. --B. E. Marston, Choice

The Private Roots of Public Action is the

most comprehensive examination of the similarities and differences in the political activity of women and men. The range of inquiry is enormous. Burns, Schlozman and Verba delve not only into political activity but also into the processes in the family, in the workplace, in places of worship, and in voluntary associations that promote and inhibit political involvement. This book goes beyond the literature in connecting to an enormous range of scholarship in political science, economics, and sociology. This is a fine piece of work. --John Mark Hansen, University of Chicago

The Private Roots of Public Action is a very important book. It pushes research on gender and participation to a whole new level, and reshapes the agenda as far as our thinking and our research about the connections among family life, the workplace, institutions of civil society, and political and governmental institutions. The authors demonstrate the importance of understanding political participation within a larger context in a way that does justice to the complexity of people's lives. --Kristi Anderson, Syracuse University

The Private Roots of Public Action is an important contribution to the literature on both political participation and gender politics. Because of its database, its tie-in to the most current work on political participation, and its comprehension of important current questions about gender politics, this book provides a new benchmark for work in this field. In particular, the Civic Voluntarism model developed by Verba, Schlozman, and Brady, and the consideration of how gender difference and inequality might feed into that model, is a unique contribution. This accessible book will be welcomed by gender politics scholars and will have an impact on the field of political participation. --Virginia Sapiro, University of Wisconsin-Madison

*Public Opinion* In what is widely considered the most influential book ever written by Walter Lippmann, the late journalist and social critic provides a fundamental treatise on the nature of human information and communication. The work is divided into eight parts, covering such varied issues as stereotypes, image making, and organized intelligence. The study begins with

an analysis of "the world outside and the pictures in our heads", a leitmotif that starts with issues of censorship and privacy, speed, words, and clarity, and ends with a careful survey of the modern newspaper. Lippmann's conclusions are as meaningful in a world of television and computers as in the earlier period when newspapers were dominant. *Public Opinion* is of enduring significance for communications scholars, historians, sociologists, and political scientists. Fame was just around the corner when Sinclair Lewis published *Free Air* in 1919, a year before *Main Street*. The latter novel zeroed in on the town of Gopher Prairie; the former stopped there briefly and then took the reader by automobile in search of America. *Free Air* heads toward a West that was brimming with possibilities for suddenly mobile Americans at the end of a world war. The vehicle in Lewis's novel, not a Model T but a Gomez-Dep roadster, takes Claire Boltwood and her father from Minnesota to Seattle, exposing them all to the perils of early motoring. On the road, the upper-crust Boltwoods are at once more insignificant and more noble. The greatest distance to be overcome is the social one between Claire and a young mechanic named Milt, who, with a cat as his traveling companion, follows close behind. If *Free Air* anticipates many of the themes of Lewis's later novels, it also looks forward to a genre that includes John Steinbeck's *Travels with*

Charley and Josh Greenfeld and Paul Mazursky's Harry and Tonto. And the character of Claire, blazing her own trail across the West, looks back to the nineteenth-century pioneer woman and ahead to the independent-minded movie heroines played by Katherine Hepburn. In his introduction Robert E. Fleming discusses the place of this early novel in Lewis's canon. **Congress and Law-making** Psychology Press This report contributes to the discussion of interconnections between scarce resources by highlighting the nexus between land, water and energy (the LWE nexus). It focuses on a dynamic, integrated, and disaggregated analysis of how land, water and energy interact in the biophysical and economic systems. The report provides projections for the biophysical and economic consequences of nexus bottlenecks until 2060, highlighting that while the LWE nexus is essentially local, there can be significant large-scale repercussions in vulnerable regions, notably on forest cover and in terms of food and water security. The analysis is based on coupling a gridded biophysical systems model with a multi-regional, multi-sectoral dynamic general equilibrium modelling assessment. Numerical insights are provided by investigating a carefully selected set of scenarios that are designed to illustrate the key bottlenecks: one scenario for each resource bottleneck, plus two scenarios that combine all bottlenecks, with and without an overlay of climate change.

The only comprehensive guide to basic and advanced design process modeling tools, materials, and techniques For nearly a century, three-dimensional models have been considered an indispensable tool of the

architectural design process. Models provide designers with an extremely effective medium for exploring ideas, testing theories, and discovering innovative solutions. Unfortunately, most guides to architectural modeling focus primarily on how to produce finished presentation models. Consequently, students are forced to learn the basics of design modeling from their peers, instructors, or frustrating trial and error. Designing with Models, the first complete, step-by-step guide to basic and advanced design process modeling, significantly reduces the learning curve. Architect Criss Mills acquaints you with essential design modeling terms, equipment, materials, and construction methods. Then, with the help of more than 700 high-quality photographs and four in-depth case studies, he walks you through the basics of determining scale; generating new ideas; exploring design alternatives; modifying, editing, and integrating new forms into models; and adding details and other final-stage refinements. Mills also provides detailed guidance on how to model using advanced tools and materials. You learn how to model with wood, found objects, metal rods and screens, clay, plexiglass, and other materials. You also learn how to work safely and effectively with power tools such as belt sanders, table saws, drills, and band saws, as well as how to transfer model dimensions to 2D plan, section, and elevation drawings.

This book offers a fresh interpretation of the relation between Greek thought and ancient Christian theology through an analysis of three foundational and controversial thinkers: Origen, Eusebius of Caesarea, and Athanasius. Rather than opposing certain categories such as philosophy besides scripture, or orthodoxy besides heresy, the author examines how language about Christ and the world functions as a theological model. This allows the recovery of the theological and religious significance of certain ideas such as subordination or the obedience of Christ, which were rejected by later orthodoxy. As an urban teacher, civic apologist, and ascetic bishop, each of the three theologians discussed offered a distinctive Christian response to the religious and ecclesiastical ideas of the third and fourth centuries. Each cosmology and Christology therefore reveals particular concerns about individual and social identity and salvation in the developing Christian community.
