Contemporary fastidious companies are required to eliminate wastes and offer value-added products and services to the customers, which requirement is fulfilled by adopting the paradigm called 'lean manufacturing'. On the other side, futuristic companies surge towards reaching the twenty-first century mission by reacting quickly in accordance with the dynamic demands of the modern customers, for which researchers have been developing a paradigm called 'agile manufacturing'. Although various techniques and tools are applied, cohesive procedures are yet to be evolved to implement these paradigms systematically and successfully in companies. In this context, this book is evolved to address students, academics, practitioners and researchers for gaining theoretical, practical and research futuristic knowledge on lean and agile manufacturing paradigms. Organised in 18 chapters, the text opens with a historical overview of lean and agile manufacturing paradigms. It then discusses the lean manufacturing principles with their application procedures. The book comprehensively analyses the methods of implementation of lean manufacturing paradigm in both traditional and moderate organisations. It also gives an equal treatment to the implementation of agile manufacturing paradigm under four drivers such as management driver, technology driver, manufacturing strategy driver and competition driver through the adoption of appropriate agile manufacturing criteria. The book concludes with a discussion of lean and agile manufacturing paradigms from the perspectives of academia, researchers and practitioners. The text is well supported by a large number of self-test questions with their answers. A unique feature of the book is the inclusion of research avenues at the end of each chapter, which enable the readers to carry out researches on these paradigms. This book is intended for the undergraduate and postgraduate students of industrial, manufacturing, production and mechanical engineering.

RajB KNRao Conference Director, Birmingham Polytechnic Condition Monitoring and Diagnostic Engineering Management (COMADEM) is a relatively new field that has already made its mark in a wide range of industries. But all the signs are that even more will be required of researchers in the field over the next decade, for COMADEM directly addresses a whole range of issues that are likely to become increasingly important to companies as competitiveness increases along with the uncertainties resulting from rapid technological change. Already for example, businesses are having to scrutinize the economics of plant and machinery in greater detail than ever before; reliability is becoming a crucial factor as the costs of unscheduled breakdowns rise and there is increasing pressure on companies to demonstrate and assure improved health and safety conditions, especially in light of the growing number of catastrophic accidents that have occurred throughout the world. Because it offers solutions to these and similar problems, COMADEM is now gaining an international reputation as a problem-solving, user-friendly and financially beneficial multi-discipline with immense potential. Many people at the senior management level are now convinced that COMADEM has much to offer and are wasting no time in reaping maximum benefit from the latest developments. The fact that the first UK informal seminar on COMADEM - COMADEM 88 - proved to be a great success and had a truly international flavour reflected this growing interest in the new field.
