The Japanese automotive industry enjoyed spectacular success in the 1980s. This was largely due to the so-called 'Lean Production System' - the combination of an efficient production system, an effective supplier system, and a product development system. In the 1990s the industry fell on hard times because of the Japanese asset price bubble and extreme currency appreciation. In this book, eminent industry specialist Koichi Shimokawa draws on his thirty years of research and fieldwork with Japanese and American firms, to show how the Japanese automotive industry has managed to recover from this difficult period. He shows how firms like Toyota were able to transfer Japanese systems to overseas plants and how they have changed in order to compete in increasingly globalized markets. In addition, the book also addresses the two major challenges to the current industry model: the rise of China and the environmental and energy supply situation.

The focus of this book is to educate the reader on the strategic principles fundamental to using information technology to gain market control. It provides case examples of how to use IT to enhance existing core competencies and strategies. The book is designed to help managers struggling with how to advantageously harness the new information revolution. It can also support executive and business education programs on managing technology when few such studies exist. While Internet and information technologies are currently hot topics many firms and executives are without the tools and know-how of how to actually use them to improve results. Some major firms have sophisticated strategies for using information technology to impact, control and even own their competitive environments. This book describes how major non-information technology companies are doing this and the strategic principles employed.

This book, describing the changing industrial dynamics after the Asian currency crisis in 1997, focuses on corporate strategies of Japanese automobile and electronics companies in Asian nations, with detailed analysis of management issues and strategies from the viewpoint of both the home economy and the recipient host economies. Among the cases presented are the global restructuring of the Korean automobile industry and the transfer of automotive technology to China via Taiwan.
