In "Heart of the Tiger" the Kilrathi empire was eradicated through the bravery of a few flying aces. Now, Captain Blair and his wing are fighting a more familiar menace—their fellow humans. Blair had settled down to the quiet life of a farmer, but he's been called back into

action to fight rebels from the Border Worlds. And Captain Blair finds that dog-fighting with people is a whole different kettle of kittens than fighting an alien cat species. Those humans are tricky in ways the Kilrathi never dreamed of! At the publisher's request, this title is sold without DRM (Digital Rights Management).

Modern science communication has emerged in the twentieth century as a field of study, a body of practice and a profession—and it is a practice with deep historical roots. We have seen the birth of interactive science centres, the first university actions in teaching and conducting research, and a sharp growth in employment of science communicators. This collection charts the emergence of modern science communication across the world. This is the first volume to map investment around the globe in science centres, university courses and research, publications and conferences as well as tell the national stories of science communication. How did it all begin? How has development varied from one country to another? What motivated governments, institutions and people to see science communication as an answer to questions of the

social place of science? Communicating Science describes the pathways followed by 39 different countries. All continents and many cultures are represented. For some countries, this is the first time that their science communication story has been told.

New Cars & Trucks Buyer's Guide
"O'Reilly Media, Inc."

The X-31 Enhanced Fighter
Maneuverability Demonstrator was unique
among experimental aircraft. A joint effort
of the United States and Germany, the
X-31 was the only X-plane to be designed,
manufactured, and flight tested as an
international collaboration. It was also the
only X-plane to support two separate test
programs conducted years apart, one
administered largely by NASA and the
other by the U.S. Navy, as well as the first X-
plane ever to perform at the Paris Air Show.

Flying Beyond the Stall begins by describing
the government agencies and private-sector
industries involved in the X-31 program, the
genesis of the supermaneuverability concept
and its initial design breakthroughs, design
and fabrication of two test airframes,
preparation for the X-31's first flight, and
the first flights of Ship #1 and Ship #2.
Subsequent chapters discuss envelope
expansion, handling qualities (especially at
high angles of attack), and flight with
vectored thrust. The book then turns to the
program's move to NASA's Dryden Flight
Research Center and actual flight test data.
Additional tasking, such as helmet-mounted
display evaluations, handling quality studies,
aerodynamic parameter estimation, and a
"tailless" study are also discussed. The book

describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

The first edition of this book was written six years ago. Since then, there have been some significant developments in the area of car audio (and video). In addition, many of the products featured in the first edition are now

obsolete. While the first edition of the book continues to sell, we have seen a bit of a slow-down at major accounts. This edition promises to be even more successful than the last. Car Stereo Cookbook, 2e is a completely revamped edition of a hugely successful title that continues to sell. This revised book will include new information on mobile video, satellite radio, mp3, wma, digital broadcast radio, and will eliminate the out-of-date products that are no longer pertinent.

Modern cars are more computerized than ever.

Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of

the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, *The Car Hacker's Handbook* will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded systems
- Feed exploits through infotainment and vehicle-to-vehicle communication systems
- Override factory settings with performance-tuning techniques
- Build

physical and virtual test benches to try out exploits safely. If you're curious about automotive security and have the urge to hack a two-ton computer, make *The Car Hacker's Handbook* your first stop.

European Business Handbook 2003

Maritime navigation has rapidly developed since the publication of the last edition of the title with methods of global position fixing for shipping becoming standardized. As in the previous two editions, this edition will provide a sound basis for the understanding of modern navigation systems and brings the student or professional up-to-date with the latest developments in technology and the growing standardization of maritime navigation techniques. Developed with close scrutiny from the US Merchant Marine

Academy and the major maritime navigation centres in the UK, out-dated techniques have been replaced by an expanded section on the now standard Navstar GPS systems and the Integrated Nav. In addition, a new chapter on the application of electronic charts will also be included, as well as problems at the end of each chapter with worked solutions.
