Entering service with the USSR Air Force in 1950, the Ilyushin IL-28

Beagle has been dubbed 'The Russian Canberra.' This is the first in-depth

study of the long-serving light bomber. Besides the USSR, it served with the air forces of Egypt, China, Czechoslovakia and Poland. The aircraft had a maximum speed of 600 mph at sea level and 515 mph at 36,000 feet. IL-28 was armed with two, fixed forward-firing 23-mm cannons and two, 23-mm cannons in a manually-directed tail position. Hardcover, 7-1/2 x 9-1/2, 224 pp, 24 color, 162 b/w and 36 line drawings

The Engineer's Guide to Plant Layout and Piping Design for the Oil and Gas Industries gives pipeline engineers and plant managers a critical real-world reference to design, manage, and implement safe and effective plants and piping systems for today's operations. This book fills a training void with complete and practical understanding of the requirements and procedures for producing a safe, economical, operable and maintainable process facility. Easy to understand for the novice, this guide includes critical standards, newer designs, practical checklists and rules of thumb. Due to a lack of structured training in academic and technical institutions, engineers and pipe designers today may understand various computer software programs but lack the fundamental understanding and implementation of how to lay out

process plants and run piping correctly in the oil and gas industry. Starting with basic terms, codes and basis for selection, the book focuses on each piece of equipment, such as pumps, towers, underground piping, pipe sizes and supports, then goes on to cover piping stress analysis and the daily needed calculations to use on the job.

JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. "The son of the Wolf" (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, "The Call of the Wild" (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including "The Sea-Wolf" (1904), "White Fang" (1906), "South Sea Tales" (1911), and "Jerry of the South Seas" (1917). One of London's most interesting novels is the semi-autobiographical "Martin Eden" (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

Industrial Piping and Equipment Estimating Manual, Second Edition delivers a comprehensive overview of information that engineers, estimators, and managers need to develop estimates

and create bids. Packed with worksheets covering combined and simple cycle power plants, refineries, compressor stations, ethanol, hydrogen and biomass plants, this reference helps construction engineers and estimators create bids where scope and quantity differences can be identified and project impacts estimated. This updated manual provides a comprehensive, accurate method for compiling piping and equipment man-hour estimates for industrial process plants—including Solar, Geothermal and Biomass Energy. This comprehensive, current manual details scopes of work based on process and increased safety in field erection. Estimating methods and statistical applications reduce errors for estimators to produce accurate estimates, making it an ideal go-to reference for estimators, engineers and managers with a level of detail and equipment breakdown necessary for today's complex industrial operations. - Explains estimating methods, scopes of work, man-hour data tables, and estimate sheets to produce direct craft man-hour estimates, RFPs, and field change orders - Includes scopes of work and man-hour data tables for any complexity of design, bid, and contract - Identifies quantity differences using the comparison method to eliminate impacts between proposed and previously installed equipment - Represents a broad mix of energy sources, including: Combined and Simple Cycle Power Plants, Refineries, Hydrogen Plants, Biomass, Ethanol, and Geothermal Power Plants, Compressor Stations, and Wastewater Treatment Plants

There are well-founded concerns that current air transportation systems will not be able to cope with their expected growth. Current processes, procedures and

technologies in aeronautical communications do not provide the flexibility needed to meet the growing demands.

Aeronautical communications is seen as a major bottleneck stressing capacity limits in air transportation. Ongoing research projects are developing the fundamental methods, concepts and technologies for future aeronautical communications that are required to enable higher capacities in air transportation. The aim of this book is to edit the ensemble of newest contributions and research results in the field of future aeronautical communications. The book gives the readers the opportunity to deepen and broaden their knowledge of this field. Today's and tomorrow's problems / methods in the field of aeronautical communications are treated: current trends are identified; IPv6 aeronautical network aspect are covered; challenges for the satellite component are illustrated; AeroMACS and LDACS as future data links are investigated and visions for aeronautical communications are formulated.

This book presents the principal structure, networks and applications of the Global Aeronautical Distress and Safety System (GADSS) for enhanced airborne Communication, Navigation and Surveillance (CNS). It shows how their implementation works to ensure better security in flight and on the airports surface; improved aircraft tracking and determination in real space and time; and enhanced distress alerting, safety; and Search and Rescue (SAR) system for missing, hijacked and landed aircraft at sea or on the ground. Main topics of this book

are as follows: an overview of radio and satellite systems with retrospective to aeronautical safety; security and distress systems; space segment with all aspects regarding satellite orbits and infrastructures; transmission segment of radio and satellite systems; ground segment of radio and earth ground stations; airborne radio and satellite antenna systems and propagation; aeronautical VHF and HF Radio CNS systems and networks; Inmarsat, Iridium and Cospas-Sasrast aeronautical satellite CNS systems and networks; Aeronautical Global Satellite Augmentation System (GSAS) and networks; Digital Video Broadcasting - Return Channel via Satellite (DVB-RCS) standards and Aeronautical Stratospheric Platform Systems (SPS) and networks.

Uplift Your IT Career Through CISCO Certifications Do you want to jumpstart your career in IT and networking by acing the Cisco Certified exams? Do you want to explore how routing and switching technologies work in real world environments? If you answered "yes" to any of these, then this is the perfect, educational and informational book for you! Hello! Welcome to "Guide for Beginners and Experts CISCO Certified." Cisco certifications are IT career qualification standards offered by Cisco Systems, which is a US-based world-renowned corporation, which specializes in the manufacturing of several electronics and IT products, and dominates in the area of networking. This book gives you a full understanding of all the concepts and topics you need to earn the most in-demand networking certification today by passing the Cisco exam. This guide offers an easy

to understand, structured approach to shortcut your path to mastering Cisco networking exams. You will learn how networking works through real-world examples throughout the book. IT helpdesk engineers who are interested in careers such as network engineers, network administrators, systems administrators, or solution architects. This book can help start your career journey into these fields. You can save hundreds of dollars by using this book along with your study guide. Here's what makes this book special: Develop a deep understanding of Cisco's features and functions Walk through complete and easy to understand explanations of each technology area covered in the exam Detailed explanation of answers 100% verified answers and explanations to each question By the end of this book you will be prepared to take the Cisco Exams Build the skills and confidence to crush the Cisco exam All of the CCNA exam topics Much, much more! Corey Jones has always maintained he didn't want a mate. After falling for his college professor and having his heart broken, he vowed to never go there again. Now, his decision to remain single is put to the test when he meets his Alpha's new personal assistant, Ethan Davies, and

discovers the man is his mate. After growing up in the foster care system all Ethan ever wanted was a home and someone to love him. He's overjoyed that his recent move has brought him to his mate. Ethan's happiness soon turns to devastation when Corey walks away from him and their bond. Ethan is forced to walk a fine line between respecting his mate's wishes and refusing to give up on the one thing he's wanted his entire life. With Ethan's determination, an interfering brother, and pack members too interested in his personal life, Corey may not stand a chance. Please Note: Corey has been re-edited, and expanded by ~13 K.

Developed under the Strategic Defence Review, and a key element in the Smart Acquisition reforms policy, the Through-Life Management approach to defence acquisition has been adopted by the Ministry of Defence in order to deliver a faster, and cheaper set of processes and systems for developing an efficient military capability. This report examines whether that capability has been delivered. Among a number of observations and recommendations, the NAO found that Through-Life had yet to become firmly established in the Department, and so yield its' benefits; that despite strong management support, no clear, consolidated strategy existed across the Department itself and that a plan had now been developed to push through the changes needed to implement the Through-Life Management approach more effectively in the Department.

This new book chronicles not only the aptly named P-61 "Black Widow", but also the Douglas P-70 series, the P-38 night fighter variants, the Bristol Beaufighter, B-25s and the DeHavilland

Mosquito - the proposed XA-26A and the P-39 nightfighters are also discussed. Historical accounts of American night fighter pilots, as well as the complete history of all night fighter squadrons formed during World War II are included, as is the development of radar and modern air defenses. This book is the product of over twenty years of study and research. Its sources include the National Archives, Northrop Aircraft archived, the U.S. Air Force Museum, the Imperial War Museum, the Smithsonian Air & Space Museum and interviews with P-61 test pilots, designers and engineers. Garry Pape's previous works include books on the P-61 and the P-38 night-fighter versions. He is currently employed by Northrop, after years with Hughes and Lockheed, and lives in California. Brig. Gen. Ronald Harrison is an F-16 Wing Commander in the Air Force Reserves, and lives in Georgia as an attorney.

The Defence Reform was launched in August 2010 as a fundamental review of how Defence is structured and managed. Many of the issues are not new and have been noted by similar reviews. The Steering Group believes an effective MOD is one which builds on the strengths of the individual Services and the Civil Service and does so within a single Defence framework that ensures the whole is more than the sum of its parts. A key driver for this review has been the Department's over-extended programme, to which the existing departmental management structure and management structure and behaviours contributed. Many of the Steering Group's proposals are designed to help prevent the Department from getting into such a poor

financial position in the future and to put it in the position to make real savings. There are 53 recommendations the key ones of which are: to create a new and smaller Defence Board chaired by the Defence Secretary to strengthen top level decision making; to clarify the responsibilities of senior leaders, including the Permanent Secretary and the Chief of the Defence Staff; make the Head Office smaller and more strategic, to make high level balance of investment decisions, set strategic direction and a strong corporate framework; focus the Service Chiefs on running their Services and empower them to perform their role effectively with greater freedom to manage; strengthen financial and performance management throughout the Department to ensure future plans are affordable; create a 4 star led Joint Forces Command; create single, coherent Defence Infrastructure and Defence Business Services organisations; manage and use less senior military and civil personnel more effectively, people staying in post longer, more transparent and joint career management.

Ever notice that—in spite of their pervasiveness—designing web applications is still challenging? While their benefits motivate their creation, there are no well-established guidelines for design. This often results in inconsistent behaviors and appearances, even among web applications created by the same company. Design patterns for web applications, similar in concept to those for web sites and software design, offer an effective solution. In *Web Application Design Patterns*, Pawan Vora documents design patterns for web applications by not only identifying design solutions for user interaction problems, but also by examining the rationale for their effectiveness, and by presenting how they should be applied.

- Design interfaces faster, with a better rationale for the solutions you choose.
- Learn from over more than 100 patterns, with extensive annotation on use and extension.
- Take a short-cut into understanding the industry with more than 500 full-color screenshots.

The piecemeal fashion in which human factors research has been conducted in the maritime domain makes information retrieval available only by scanning through numerous research journals and conference papers. Bringing together human factors information from this and other domains, *Human Factors in the Maritime Domain* integrates a common body of knowledge

into one single volume. The book provides the vital background information necessary to acquire a core knowledge base and a much-needed overview of human factors within the maritime domain. It starts by putting the topic into an historical and theoretical context, moves onto more specific and detailed topics and contemporary thinking in human factors, then reviews new maritime technology. The authors take a holistic approach based on a model of the socio-technical system of work in the maritime domain. They synthesize available knowledge and research, then present in an easily acceptable framework with example, illustrations, and case studies whenever possible, making the text rigorous, useful, and enjoyable. The three authors draw on a range of diverse backgrounds including working as a maritime surveyor, transport consultant, human factors lecturer, and mechanical engineer. They have undertaken maritime research in Denmark, Australia, Malta, and the UK. They have published several other human factor books on related topics. This combination of human factors knowledge, maritime wisdom, and substantial publication experience results in a book that is effective and practical.

Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for

commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.

Working Guide to Reservoir Engineering provides an introduction to the fundamental concepts of reservoir engineering. The book begins by discussing basic concepts such as types of reservoir fluids, the properties of fluid containing rocks, and the properties of rocks containing multiple fluids. It then describes formation evaluation methods, including coring and core analysis, drill stem tests, logging, and initial estimation of reserves. The book explains the enhanced oil recovery process, which includes methods such as chemical flooding, gas injection, thermal recovery, technical screening, and laboratory design for enhanced recovery. Also included is a

discussion of fluid movement in waterflooded reservoirs. Predict local variations within the reservoir Explain past reservoir performance Predict future reservoir performance of field Analyze economic optimization of each property Formulate a plan for the development of the field throughout its life Convert data from one discipline to another Extrapolate data from a few discrete points to the entire reservoir
