Policy Guide to Steel Moment-  
Frame Construction Univ of  
California Press  
Prior to the 1994 Northridge  
and 1995 Kobe earthquakes,  
engineers believed that steel  
moment-frames would bend  
under earthquake loading, but  
not break. As a result, this  
became one of the most  
common types of construction  
used for major bldgs. in areas  
subject to severe earthquakes.  
The discovery of the potential  
for fracturing in these frames  
called to question the adequacy  
of the building code provisions  
dealing with this type of  
construction and created a crisis  
of confidence. In response,  
FEMA issued this policy guide  
to provide a non-technical  
summary of valuable  
information, an understanding  
of the risk associated with steel  
moment-frame buildings, and  
the practical measures that can  
be taken to reduce this risk.

This pocket manual is designed to guide medical professionals in acquiring skills in basic ultrasound imaging. It describes the most common scans performed at the patient's bedside, specifically in the emergency department or intensive care unit. Following an overview of basic ultrasound principles, the use of this modality to visualize specific organ systems is described. In a quick-reference bulleted format, each chapter details indications, basic techniques (patient position, organ windows/views), probe placement, anatomy, pathology, pearls, and key points in ultrasound imaging. The extensive collection of images

In 2014, the Chemical Signals in Vertebrates (CSiV) group held its 13th triennial meeting in conjunction with the 30th meeting of the International Society of Chemical Ecology (ISCE). The meeting convened on the campus of the University of Illinois at Urbana-Champaign. This meeting was the first held jointly with these two groups, which share common history and are dedicated to understanding the role of chemical communication in the lives of organisms. This volume is a collection of the proceedings of this meeting and, like the meeting, cover a variety of topics in chemical ecology, including Chemical Ecology of Social Behavior; Chemical Signals – Analysis and Synthesis; Evolution, Genomics, and Transcriptomics of Chemical Signals; Molecular Mechanisms of Semiochemical Perception and Processing; Multimodal Communication; and Neuroethology and Neurophysiology.

**Strategic Air Command (SAC) Aircrew Scheduling Aid (SASA) User's Guide**

The problem addressed in this project, lack of an internship manual geared towards interning at the DOR, was first noticed when the author was interning at the DOR. The existing manual has clear guidelines on student responsibilities, hours needed for internship, and what is expected of the intern at the internship site from the school's perspective. The author found the current manual to be very helpful but she would have liked a guide that describes how to obtain an internship at DOR, and what to do once at the internship site, a guide that will clearly give instructions on the whole process of a case and proper documentation methods. This manual is a necessity because once at the internship site, the intern is completely dependent on

the guidance of the assigned counselor or supervisor. Counselors at most DOR offices carry an average of 100+ cases and might not always be available for the intern's questions. In some offices, the interns are not offered any sort of training except shadowing counselors and following a manual that outlines the processes that will be helpful to the intern when they are working with clients. The new DOR student manual will address strategies to obtain an internship, structure of DOR, processes and case documentation procedure specific to DOR, and help interns become better prepared for an internship with DOR. Having a student manual to help interns assimilate well to their first real world experience of being a counselor will be beneficial. This will help reduce the intern's dependency on other counselors and save valuable time when learning about DOR procedures. For these reasons the author finds the current project will be useful for future DOR interns. Data for this project was obtained through reviewing internship manuals from other Council on Rehabilitation Education [CORE] accredited rehabilitation counseling program, professional journals, and Internet sources. Other sources of data were interviews with supervisors at the CA State Department of Rehabilitation [DOR] supervisors and students of vocational rehabilitation counseling program at California State University, Sacramento and personal experiences from the author's internship at the CA State Department of Rehabilitation,

Antioch. A student guide that addresses strategies to obtain and prepare for an internship with DOR provides information on the case processes and documentation procedure specific to DOR was developed. This guide will help interns become better prepared for an internship with DOR.
