time. Paul Schouwenburg s story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars -from the early 60s onwards, he begins to uncover several rare Alfas, from 1900CSS Zagato to Tipo 33/2, in addition to a host of very special Ferraris, including a 250GTO,

340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn't exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box,

Paul's passion and incredible drive make for exciting reading. Indeed this is a unique take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn't even give away his 250 GTO at the time!

At a meeting of  
dendrochronologists  
an American  
colleague described  
the effects of  
volcanic eruptions  
on annual ring  
formation in  
bristlecone pines. I  
knew very little  
about either  
volcanoes or  
American pines! At  
the same meeting  
European scientists  
spoke on the  
dendrochronologica  
I dating of lakeshore  
settlements and the  
effects of larch bud  
moth attack on trees  
in the Alps. It is  
possible that  
American  
participants were not

in a position to fully  
appreciate these  
papers either. In  
other words,  
dendrochronology is  
an extremely  
interdisciplinary  
science; its facets  
range from modern  
statistics on wood  
anatomy to the  
history of art. It is  
difficult even for  
dendrochronol ogists  
to keep in touch with  
the whole spectrum,  
and even more  
difficult for the  
layman to obtain an  
overall view of the  
many methods and  
fields of application.  
In recent times  
specialisation has  
begun to hinder  
communication be  
tween the various  
sectors.  
Archaeologists, for  
instance, set up their

own  
dendrochronological  
laboratories and  
construct  
independent  
chronologies to serve  
their particular  
interests. The  
scientific institutions  
which previously  
carried out such  
work are now  
turning more and  
more to strongly  
statistically or  
biologically-oriented  
questions. The full  
wealth of  
information  
contained in tree  
rings, however, will  
be revealed only  
when  
dendrochronologists  
make a concerted  
effort to relate the  
findings of the  
different fields. In  
spite of inevitable  
specialisation, it is

Trail Blazer Publications Interested in building your own dune buggy but don't know where to start? This comprehensive guide to dune buggy assembly and customizing makes the process seem like a day at the beach. With each step illustrated in exacting detail, this all-new buggy book simplifies the entire project and provides complete instructions: --

Selecting the correct frame, body, suspension, and engine for the intended use -- Mounting the body, wiring the chassis, and installing lights and gauges -- Painting the body -- Obtaining a license for street use Much of the information provided is also applicable to building a street rod or assembling a kit car. And at this price, there's nothing else like this book available anywhere. The Life and Legends Springer Science & Business Media This text gives

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and

backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if

you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and super moto--promising a solution to virtually any handling problem.
