Safety and Security in Tourism IGI Global More than three million students globally are on the move each year, crossing borders for their tertiary education. Many travel from Asia and Africa to English speaking countries, led by the United States, including the UK, Australia and New Zealand where students pay tuition fees at commercial rates and prop up an education export sector that has become lucrative for the provider nations. But the 'no frills' commercial form of tertiary education, designed to minimise costs and maximise revenues, leaves many international students inadequately protected and less than satisfied. International Student Security draws on a close study of international students in Australia, and exposes opportunity, difficulty, danger and courage on a massive scale in the global student market. It works through many unresolved issues confronting students and their families, including personal safety, language proficiency, finances, sub-standard housing, loneliness and racism.

Tourism, Crime and International Security Issues
 Oxford University Press

In the light of a new millennium, the tourism industry has faced some (major) global risks which seriously affected its functioning, leading it to the brink of collapse. What is most important, after September of 2001, is that tourism security and safety not only captivated the attention of scholars but is also situated as a leading object of study within the fields of tourism research. The scourge of terrorism associated with the ecological crisis, recent natural disasters without mentioning virus outbreaks as Ebola, SARS or even COVID-19, and political instability place the tourism industry in jeopardy. It is safe to say that the ontological security of tourists occupied a central position in tourism research. Of course, the recent COVID-19 outbreak accelerated a socio-economic crisis in the service sub-sectors that paralyzed the global trade and the tourism industry. The imposition of severe lockdowns, social distancing as well as the borders and airspace closure speak us of a new normal or a feudalized world where tourists are feared or even demonized. In the days just after COVID-19, academia should debate the new guidelines of future research not only to enhance tourism security but to put the

industry back on its feet again. The present book project is a selection of high-quality chapters, which are authored by well-renowned experts in tourism safety and security; all of them were invited to bring some reflections on the future of the discipline in a post-COVID-19 context. Authors come from different disciplines, cultures and nations, so the book offers a fertile ground towards an international platform for professionals, researchers, students or policymakers interested in the future of tourism.
