The Handbook of Qualitative Research in American Music Education is a resource for music education researchers, music education graduate students, and P-16 music teachers. Qualitative research has become an increasingly popular research approach

in music education in the last 20 years and until now there has been no source that clarifies terms, challenges, and issues in qualitative research for music education. This Handbook provides that clarification and presents model qualitative studies within the various music education disciplines. The first section of the text defines qualitative research, provides a history of qualitative research in music education, clarifies epistemological foundations and theoretical frameworks and addresses quality in qualitative research. The approaches of case study, ethnography, phenomenology, narrative, and practitioner inquiry are addressed in the second section. Part III examines data collection and analysis with regard to observations, interviews, documents and multi-media data. Within the 11 chapters in the fourth part of the book authors provide syntheses of qualitative research within various areas of music education (i.e., early childhood, strings, and teacher education). The final part of the book examines technology, rigor, ethics, and the future of qualitative research. *Techniques and Procedures for Developing Grounded Theory* SAGE

A Methods Sourcebook SAGE Publications

This book is the second of three paperback volumes taken from *The SAGE Handbook of Qualitative Research, Fourth Edition*. This volume isolates the major strategies—historically, the research methods—that researchers can use in conducting concrete qualitative studies. The question of methods begins with questions of design and the matters of money and funding. These questions

always begin with the researcher who moves from a research question to a paradigm or perspective, and then to the empirical world. The history and uses of these strategies are explored extensively in this volume. The chapters move from forms (and problems with) mixed methods inquiry to case study, performance and narrative ethnography, to constructionist analytics to grounded theory strategies, testimonies, participatory action research, and clinical research.
