Bangladesh as an independent state in 1971. No other work on the subject has the same breadth of vision or the same power to absorb and engage the reader. This is essential reading for anyone who wishes to explore the human reality behind the stark facts of the Bangladesh Liberation War. In the present translation Humayun Ahmed's highly accessible Bengali style has been recreated in modern colloquial English, making an easy read for Western readers. This edition also comprises explanatory notes to assist those unfamiliar with the cultural and historical background to the novel.

Rabindranath Tagore reinvented the Bengali novel with *Farewell Song*, blurring the lines between prose and poetry and creating an effervescent blend of romance and satire. Through Amit and Labanya and a brilliantly etched social milieu, the novel addresses contemporary debates about 'good' and 'bad' writing, the nature of love and conjugality, and the influence of Western culture on Bengali society. Set against the idyllic backdrop of Shillong and the mannered world of elite Calcutta society, this sparkling novel expresses the complex vision and the mastery of style that characterized Tagore's later works. Tagore was not only an immensely versatile poet; he was also a great short story writer, novelist, playwright, essayist, and composer of songs.

highlights the possible impacts of climate change on groundwater based irrigation in the country. Climate change is one of biggest challenges to society. It can lead to serious impacts on production, life and environment on a global scale. Higher temperatures and sea level rise will cause flooding and water salinity problems which will bring about negative effects on agriculture and high risks to industry and socio-economic systems in the future. Climate change will lead to many changes in global development and security especially energy, water, food, society, job, diplomacy, culture, economy and trade. The Intergovernmental Panel on Climate Change (IPCC) defines climate change as: "Any change in climate over time, whether due to natural variability or as a result of human activity." Global climate change has emerged as a key issue in both political and economic arenas. It is an increasingly questioned phenomenon, and progressive national governments around the world have started taking action to respond to these environmental concerns.

Cold War-era strategic thinking was driven by the belief that individuals, organizations, and foreign states could be deterred from offensive action by the threat of reprisal. That assurance was shaken with the terrorist attacks of September 11,

2001; suddenly, it seemed that no threat was powerful enough to deter individuals or organizations that valued political objectives over their own lives and the lives of their members. More than a decade later, new research and theory are bringing deterrence back into currency as a viable counterterrorism strategy. Alex S. Wilner updates deterrence theory for conflict in the twenty-first century, arguing for its value against challengers such as rogue states, cyber warriors, and transnational terrorist organizations. *Detering Rational Fanatics* provides a full-scale discussion of deterrence theory concepts and controversies, assessing the utility of relying on the logic of deterrence and coercion to counter contemporary terrorism. In particular, targeted killings directed against the Taliban of Afghanistan provide a vivid illustration of the impact deterrence can have on militant behavior: precision strikes that eliminate militant leaders represent a significant cost to planning and participating in political violence, a cost that can coerce, manipulate, and alter behavior. Though deterrence theory is not a panacea for terrorism, insurgency, or militancy, it can serve as a strategic guide for state responses; as Wilner shows, terrorist violence can indeed be deterred.

Generally, in any human field, a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B in A which is embedded with a stronger structure S. These types of structures occur in our everyday's life, that's why we study them in this book. Thus, as a particular case: A Non-associative ring is a non-empty set R together

with two binary operations '+' and '.' such that (R, +) is an additive abelian group and (R, .) is a groupoid. For all a, b, c in R we have  $(a + b) . c = a . c + b . c$  and  $c . (a + b) = c . a + c . b$ . A Smarandache non-associative ring is a non-associative ring (R, +, .) which has a proper subset P in R, that is an associative ring (with respect to the same binary operations on R).
