REVEL(tm) for *Abnormal Psychology: A Scientist-Practitioner Approach* portrays the human face of various psychological conditions, helping students to understand that abnormal behavior is complex and subject to many different forces.  
Authors Deborah Beidel, Cynthia Bulik, and Melinda Stanley -- all active

researchers, clinicians, and educators -- bring abnormal psychology to life via a scientist-practitioner approach that integrates biological data with research from the social and behavioral sciences. REVEL for the Fourth Edition offers expanded coverage of disorders emphasized in the DSM-5, as well as discussions of contemporary issues that foster student interest. REVEL is Pearson's newest way of delivering our respected

---

content. Fully digital and highly engaging, REVEL replaces the textbook and gives students everything they need for the course. Informed by extensive research on how people read, think, and learn, REVEL is an interactive learning environment that enables students to read, practice, and study in one continuous experience -- for less than the cost of a traditional textbook. NOTE: REVEL is a fully digital delivery of Pearson content. This ISBN is for

the standalone REVEL access card. In addition to this access card, you will need a course invite link, provided by your instructor, to register for and use REVEL. Memmler's Structure and Function of the Human Body McGraw-Hill Education Ions, their transport across membranes, and their flow through specialized ion channels are central to the understanding of brain function, normal and pathological. The first part of this book deals with the regulation of ions in

brain extra- and intracellular fluids. Regulation is effected by the blood-brain barrier, and by membrane ion pumps and other transport mechanisms of neurons and glial cells. Normally adjusted for optimal neural function, ion levels can change and alter the excitability of neurons and influence synaptic transmission in healthy and diseased brains. After an introduction to the electrophysiology of epilepsy, and a description of experimental seizure "models," the second part discusses the roles of the faulty regulation of ions and of the diseases of

---

ion channels in generating epileptic seizures. The mechanisms of action of various anticonvulsant drugs are also considered. The third part is devoted to the phenomenon of spreading depression and its likely role in human diseases. The final chapters of the book deal with the role of ions in the devastation caused by lack of oxygen and by insufficient blood flow to brain tissue, and the reasons for the exceptional vulnerability of certain classes of central neurons in hypoxia and stroke. The book will be of interest to neuroscientists,

neurobiologists, neurophysiologists, neurologists, neurosurgeons, and to their students and trainees.
