The United States has the world's highest rate of incarceration in the world. As awful as that truth is, its social consequences—recycling offenders through an overwhelmed criminal justice system, ever-mounting costs, and a growing class of permanently criminalized citizens—are even more devastating. With the authority of a prominent legal scholar and the practical insights gained through her work on criminal justice reform, Rachel Barkow reveals how dangerous it is to base criminal justice policy on the whims of the electorate and argues for a transformative shift toward data and expertise.

This is a practical introduction to multilevel analysis suitable for all those doing research. Most books on multilevel analysis are written by statisticians, and they focus on the mathematical background. These books are difficult for non-mathematical researchers. In contrast, this volume provides an accessible account on the application of multilevel analysis in research. It addresses the practical issues that confront those undertaking research and wanting to find the correct answers to research questions. This book is written for non-mathematical researchers and it explains when and how to use multilevel analysis. Many worked examples, with computer output, are given to illustrate and explain this subject. Datasets of the examples are available on the internet, so the reader can reanalyse the data. This approach will help to bridge the conceptual and communication

gap that exists between those undertaking research and statisticians.

Ocular toxicity is routinely assessed in toxicology studies conducted for regulatory purposes. Ocular anatomy and physiology and the assessment of ocular toxicity itself can be challenging to scientists involved in the safety assessment of pharmaceuticals, pesticides and other agents. Anatomical and physiological differences between species can impact the nature of ocular effects observed following intended or unintended exposure of ocular tissues to xenobiotics. Ocular Toxicity in Laboratory Animals provides a concise reference addressing ocular anatomy and physiology across species that will enhance the design and

interpretation of toxicology studies conducted for regulatory purposes. The book provides an overview of routine and advanced techniques that are used to assess ocular toxicity including slit lamp biomicroscopy, indirect ophthalmoscopy, electrophysiology and imaging methods for the anterior and posterior segments of the eye. Additionally, the book defines the regulatory expectations for pharmaceuticals intended to treat ocular diseases and for other non-pharmaceutical regulated chemicals. With contributions from experts in the field, *Ocular Toxicity in Laboratory Animals* is an authoritative, accessible guide for toxicologists and other scientists involved in conducting toxicology studies for regulatory purposes and/or reviewing data from such studies.

Psychiatry for Actors: Building Characters Using Psychiatric Principles is a textbook for helping actors, directors, and playwrights in creating characters in plays and films. There are no characters in plays and films, who are not impacted by normal

and/or abnormal psychiatric and psychological phenomena. It is important to be faithful to the true presentations of behaviors since audience members know from their personal, family, friends, and community experiences of the true presentations of behaviors. It is based upon Donald Fidler's 30 years of experience of teaching medical students, teaching psychiatry residents, teaching acting students, coaching actors, and writing and directing plays and films.

There is disagreement and critique, for this is not a simple book. It is so packed with information that it serves as both a challenge and a resource. This second edition of the Handbook will take its place as an aid in understanding the evolution of contemporary gestalt therapy and as a guide to the evolving research tradition in gestalt therapy. It rightfully belongs on the shelves of both beginning trainees in gestalt therapy and advanced and experienced practitioners, and certainly represents a resource
