This dissertation examines banks' resolution of distressed commercial mortgage loans. Following the introduction in the first chapter, the second chapter reviews the literature on banks' resolutions of distressed loans. In chapter 3, I present a model of banks' resolution decisions under information asymmetry. The model shows that banks prefer to renegotiate instead of foreclosing problem loans when there is a cost associated with revealing the quality of their

mortgage portfolios. The fourth chapter presents empirical findings that are consistent with the model, i.e., that banks' resolution decisions are affected by their concerns of revealing negative information through large foreclosures. I find that larger loans are more likely to be renegotiated than smaller loans and that banks take a shorter amounts of time to renegotiate rather than to foreclose on problem loans. Secondly, the impact of loan size on the propensity to renegotiate is magnified for banks with superior past performance and for banks with lower local mortgage distress. In addition, I find that banks that raised new equity capital exhibit a stronger tendency to renegotiate larger problem loans in the previous year. In chapter 5, as a falsification test, I compare the bank-held sample with a Commercial Mortgage Backed Securities (CMBS) sample that does not share banks' mimicking motives, because special servicers of problem loans are not the originators of those loans. I find that the results are weaker or not present for CMBS, in contrast to the bank loan sample. In chapter 6, I study banks' resolution of problem loans while considering their problem loan portfolios. I consider two aspects of banks' problem loan portfolios -- their relationships with borrowers and the degree of regional diversification. Empirical results suggest that the sample banks choose to act "tougher", i.e., foreclose more, as they have more loans with a borrower. Finally, the degree of geographical diversification in problem loan portfolios may affect banks' resolution decisions. I find that as banks have geographically concentrated problem loan portfolios, they are more likely to renegotiate larger loans, measured either absolutely or relatively. Chapter 7 concludes.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with

consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
