This report concerns the policy and usage of Independent Government Cost Estimates (IGCE's) throughout the US Army Materiel Command's (AMC) major subordinate commands. A statistical analysis of a representative sample of production contracts is made comparing IGCE's, contractors' estimates, Government's price objectives and negotiated prices. The study objectives are to determine the influence of IGCE's on the price analysis/cost analysis estimates which are used to determine the Government's initial price objective; assess the

relationship between the IGCE's and the contractors' proposed price; and determine the most effective method of using the IGCE in the contract cost estimating process. Based upon the analysis and interview with preparers and users of IGCE's, recommendations are made concerning policy and use of IGCE's within AMC. (Author).

This proceedings volume examines the state-of-the art of productivity and efficiency analysis and adds to the existing research by bringing together a selection of the best papers from the 8th North American Productivity Workshop (NAPW). It also aims to analyze world-wide perspectives on challenges that local economies and institutions may face when changes in productivity are observed. The volume comprises of seventeen

papers that deal with productivity measurement, productivity growth, dynamics of productivity change, measures of labor productivity, measures of technical efficiency in different sectors, frontier analysis, measures of performance, industry instability and spillover effects. These papers are relevant to academia, but also to public and private sectors in terms of the challenges firms, financial institutions, governments and individuals may face when dealing with economic and education related activities that lead to increase or decrease of productivity. The North American Productivity Workshop brings together academic scholars and practitioners in the field of productivity and efficiency analysis from all over the world. It is a four day conference exploring topics related to productivity, production theory and efficiency measurement in economics, management science, operations research, public administration, and related fields. The papers in this volume also address general topics as health, energy, finance, agriculture, utilities, and economic development, among others. The editors are comprised of the 2014 local organizers, program committee members, and celebrated guest conference speakers.

Bank (ADB) has been continuously undertaking measures to enhance the effectiveness of its operations. To improve projects both at the preparation and implementation stages, ADB issued the Guidelines for Economic Analysis of Projects in 1997 as a means to enhancing project quality at entry. The conduct of proper economic analysis helps ensure the efficient use of development funds and public resources and thereby increase aid effectiveness. This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost-benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. These case studies illustrate the application of suggested methodologies, taking into account sector-specific needs, as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for conduct of economic analysis.

Cost models underlie all the techniques used in construction cost and price forecasting, yet until relatively recently industry has been unfamiliar with their characteristics and properties. An understanding of the various types of cost model is vital to enable effective cost control and the development of future forecasting techniques. This volume brings together more than 20 seminal contributions to building cost modelling and introduces the major landmarks in progress and thinking in this field: * strategies and directions * explorations in cost modelling * cost-product/process modelling * dealing with uncertainty The strong techniques bias of this book will appeal to construction professionals involved in estimating, as well as researchers and students of building economics.

Life-cycle Cost Analysis in Pavement Design Berrett-Koehler Publishers
Changes in production processes reflect the technological advances permeating our products and services. U. S. industry is modernizing and automating. In parallel, direct labor is fading as the primary cost driver while engineering and technology related cost elements loom ever larger. Traditional, labor-based approaches to

estimating costs are losing their relevance. Old methods require augmentation with new estimating tools and techniques that capture the emerging environment. This volume represents one of many responses to this challenge by the cost analysis profession. The Institute of Cost Analysis (ICA) is dedicated to improving the effectiveness of cost and price analysis and enhancing the professional competence of its members. We encourage and promote exchange of research findings and applications between the academic community and cost professionals in industry and government. The 1990 National Meeting in Los Angeles, jointly sponsored by ICA and the National Estimating Society (NES), provides such a forum. Presentations will focus on new and improved tools and techniques of cost analysis. This volume is the second in a series. The first was produced in conjunction with the 1989 National Meeting of ICA/NES in Washington, D.C. The articles in this volume, all refereed, were selected from about 100 submitted for presentation at the Los Angeles meeting.

This is a free full sample report offered by Intratec Solutions to demonstrate, in advance, the type of information you will get when you buy one of our reports, offering the same standard and structure (types of graphs, tables

and descriptions) that you will find in all of our Cost Analysis Overview reports. This report presents alternatives for producing PG Propylene from different feedstocks and a cost comparison of these alternatives, across different countries. More specifically, the report compares the costs of PG Propylene production through the following pathways:

- * Pathway 1: Propylene Production from Light Naphtha
- * Pathway 2: Propylene Production from Ethylene and Butenes
- * Pathway 3: Propylene Production from Propane (with Hydrogen Generation)

Pathway 1 corresponds to a steam cracker for Propylene production (ethylene as co-product). In Pathway 2, Propylene is produced via metathesis reaction of ethylene with 2-butene (present in raffinate-2 feedstock). In Pathway 3, propane is dehydrogenated to Propylene with hydrogen generated being valued as fuel. The analysis presented in this report includes:

- * A comparison of the economic potential of the pathways listed above in several countries, comprising:
 - Comparative analysis of capital costs
 - Comparative analysis of production costs
- * Comparison between product price and raw materials costs of each pathway
- An overview of each production pathway, including:
 - Raw material(s) consumption figures and product(s) generated
 - Related technology licensors and block flow diagram of representative industrial processes

Keywords: Propene, Ethene, Steam Cracking, PDH, Propane Dehydrogenation, Olefins Conversion Technology, OCT

The Guidebook for Acquiring Commercial Items (Jan 2018) is written for anyone seeking additional understanding on commercial items-the definition, the determination, and how to price them. This includes supplies purchased from the General Services Administration Federal Supply Schedule (GSA FSS), which are considered commercial items. Contracting officers have asked for more examples in the guidebook, and we have complied. All examples are hypothetical to illustrate a point and bear no relation to any actual experience. A short, simple example is labelled an "Application." More complex examples are termed "Practical Examples" and follow a standard format: Objective; Background; Analysis; Results; and Takeaways. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean

(legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

A revised edition of PS-14, "An Introduction to Benefit-

Cost Analysis for Evaluating Public Programs," presents concepts and techniques of benefit-cost analysis as tools that can be used to assist in deciding between alternatives. The goals of the new edition include teaching students to think about the possible benefits and costs of each alternative; to define what they foresee as program outputs and to consider possible undesirable consequences; and to recognize the trade-offs that are implicit in all decisions. Topics of the eight modules (16 exercises) include the following: classifying direct vs. indirect benefits, as well as tangibles vs. intangibles; pecuniary or price effects; the business model of benefit-costs analysis; business as a model for government decisions; supply and demand in the market for goods; challenges for valuation presented by government programs; the comparison of costs and benefits that occur at different times; shadow pricing; double-counting, and benefits valued as net savings. Everyday examples are used to present what are frequently difficult concepts and relationships for the student with little background in economics. A sample student evaluation form is appended.
