Commercial contract law is in every sense optional given the choice between legal systems and law and arbitration. Its 'doctrines' are in fact virtually all default rules. Contract Law Minimalism advances the thesis that commercial parties prefer a minimalist law that sets out to enforce what they have decided - but does nothing else. The limited capacity of the legal process is the key to this 'minimalist' stance. This book considers evidence that such minimalism is indeed what commercial parties choose to govern their transactions. It critically engages with alternative schools of thought, that call for active regulation of contracts to promote either economic efficiency or the trust and co-operation necessary for 'relational contracting'. The book also necessarily argues against the view that private law should be understood non-instrumentally (whether through promissory morality, corrective justice, taxonomic rationality, or otherwise). It sketches a restatement of English contract law in line with the thesis.

Tom Miller recognized the need to write this book a few years ago, after reviewing postings on popular discussion pages frequented by actuaries. He was surprised and troubled by the magnitude of misinformation posted on these websites. Clearly actuaries and actuarial students posting this information are only trying to be helpful to one another, but they frequently lack the necessary experience and expertise to offer sound advice. Tom seeks to provide readers of his career guide with valuable insights regarding the actuarial employment market, covering topics such as choice of product specialization, how to conduct effective job searches, switching successfully from insurance to consulting and inside tips on what clients are really looking for when they interview you. Armed with deep knowledge and a unique perspective on the actuarial profession, Tom expects that this book will be a resource that will help you make better career decisions and "Achieve Your Pinnacle."

This book explores the practical and symbolic resources of legitimacy which the elites of medieval Scandinavia employed to establish, justify, and reproduce their social and political standing between the end of the Viking Age and the rise of kingdoms in the thirteenth century.

Geographically the chapters cover the Scandinavian realms and Free State Iceland. Thematically the authors cover a wide palette of cultural practices and historical sources: hagiography, historiography, spaces and palaces, literature, and international connections, which rulers, magnates or ecclesiastics used to compete for status and to reserve haloing glory for themselves. The volume is divided in three sections. The first looks at the sacral, legal, and acclamatory means through which privilege was conferred onto kings and ruling families. Section Two explores the spaces such as aristocratic halls, palaces, churches in which the social elevation of elites took place. Section Three explores the traditional and novel means of domestic distinction and international cultural capital which different orders of elites - knights, powerful clerics, ruling families etc. - wrought to assure their dominance and set themselves apart vis-à-vis their peers and subjects. A concluding chapter discusses how the use of symbolic capital in the North compared to wider European contexts.

Crime and the fear of crime are issues high in public concern and on political agendas in most developed countries. This book takes these issues and relates them to the contribution that urban planners and participative planning processes can make in response to these problems. Its focus is thus on the extent to which crime opportunities can be prevented or reduced through the design, planning and management of the built environment. The perspective of the book is transatlantic and comparative, not only because ideas and inspiration in this and many other fields increasingly move between countries but also because there is a great deal of relevant theoretical material and practice in both the USA and the UK which has not previously been

pulled together in this systemic manner.

Utilising existing human resource management (HRM) theory and practice, it contextualises it to the tourism and hospitality industries by looking at the specific employment practices of these industries, such as how to manage tour reps or working in the airline industry. It initially sets the scene with a broad review of the evidence of HRM practice within the tourism and hospitality industries. Having identified the broader picture, the text then begins to focus much more explicitly on a variety of HR policies and practices such as: • recruitment and selection: the effects of ICT, skills required specific for the industry and the nature of advertising • legislation and equal opportunities: illegal discrimination and managing diversity • staff health and welfare: violence in the workplace, working time directives, smoking and alcohol and drug misuse • remuneration strategies in the industry: the 'cafeteria award' approach, minimum wage and tipping Human Resource Management for the Hospitality and Tourism Industries is illustrated throughout with both examples of best practice for prescriptive teaching and discussion, and international case studies to exercise problem solving techniques and contextualise learning. It incorporates a user friendly layout and includes pedagogic features such as: chapter outlines and objectives, HRM in practice - boxed examples, reflective review questions, web links' discussion questions and further reading. Accompanying the text are online supplementary lecturer materials including downloadable figures from the book, PowerPoint slides, further cases and extra exercises and points for discussion.

From the Foreword: This volume provides short biographical sketches of the commanding generals and chiefs of staff who have led the United States Army. Their rise through the levels of leadership to the pinnacle of their profession reveals both striking parallels and equally fascinating contrasts. While their responsibilities have evolved over the years, the essential elements of leadership remain unchanged. The format of this volume combines biographical information along with the officially designated portraits of the commanding generals and chiefs of staff. It also includes brief accounts of the artists selected to paint the official portraits. As an aspect of the Army art program, these portraits add an interesting and revealing dimension to the biographer's words. This volume not only celebrates the legacy of dedication and patriotism left by these leaders, but also enhances our understanding of military leadership at the highest levels. All those interested in the profession of arms should become familiar with those who have led our Army.

A companion guidebook to the number-one bestselling Good to Great, focused on implementation of the flywheel concept, one of Jim Collins' most memorable ideas that has been used across industries and the social sectors, and with startups. The key to business success is not a single innovation or one plan. It is the act of turning the flywheel, slowly gaining momentum and eventually reaching a breakthrough. Building upon the flywheel concept introduced in his groundbreaking classic Good to Great, Jim Collins teaches readers how to create their own flywheel, how to accelerate the flywheel's momentum, and how to stay on the flywheel in shifting markets and during times of turbulence. Combining research from his Good to Great labs and case studies from organizations like Amazon, Vanguard, and the Cleveland Clinic which have turned their flywheels with outstanding results, Collins demonstrates that successful organizations can disrupt the world around them—and reach unprecedented success—by employing the flywheel concept.
