Basic Maintenance Manual
Jeffrey Frank Jones
This manual describes and
provides trouble-shooting aids
for the Automatic Sample
Changer electronics on the
automatic beta counting
system, developed by the Los
Alamos Scientific Laboratory
Group CNC-11. The output of
a gas detector is shaped by a
preamplifier, then is coupled to
an amplifier. Amplifier output
is discriminated and is the
input to a scaler. An
identification number is
associated with each sample.
At a predetermined count
length, the identification
number, scaler data plus other
information is punched out on
a data card. The next sample
to be counted is automatically
selected. The beta counter uses
the same electronics as the
prior count did, the only
difference being the sample
identification number and
sample itself. This manual is
intended as a step-by-step aid
in trouble-shooting the
electronics associated with
positioning the sample,
counting the sample, and
getting the needed data
punched on an 80-column data
card.

Operation and Maintenance Manual for Hand Pumps

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little

technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.
