The purpose of this study was to measure the general knowledge and the nutrition knowledge of pressure ulcer care of RDs in practice with regards to education, years of experience, age, different work settings, recency of exposure to educational material, and interest level towards working with older adults. Participants that were included in the study were 760 Ohio licensed RDs. The survey included demographics and 40 multiple-choice questions. Multiple-choice questions were divided into two parts: nutrition and treatment. Independent sample t-tests, ANOVAs, and Pearson's correlations were used to compare the scores of the nutrition and the

treatment section with the data collected. Significance was set a priori at  $p < .05$ . Results of this study showed that there were no differences in pressure ulcer test scores with regards to the level of education; however, significance was found in years of experience, age, different work settings, recency of exposure to educational material, and interest level towards working with older adults. Study findings suggest that continuous exposure of updated pressure ulcer educational material throughout the RDs' career, particularly RDs who work in hospitals or long-term care facilitates, is important for maintaining or increasing knowledge of pressure ulcers.

This book is primarily written for students preparing for various competitive examinations. It will also be helpful for those preparing for midterm exams in schools or universities. The aim of this book is twofold: first, to help the students preparing for competitive examinations, seeking admission to universities or schools, or prepare for job interviews. Second, it will also be helpful for those studying HUMAN NUTRITION. This book contains more than 5738 questions from the core areas of HUMAN NUTRITION. The questions are grouped chapter-wise. There are total 1 chapters, 27 sections and 5738+ MCQ with answers. This reference book provides a single source for multiple choice questions and answers in

HUMAN NUTRITION. It is intended for students as well as for developers and researchers in the field. This book is highly useful for faculties and students. The strategy used in this book is the same as that which mothers and grandmothers have been using for ages to induce kids in the family to sip more soup (or some other nutritious drink). The children are told that some cherries (their favourite noodles or cherries ) are hidden somewhere in the bowl, and that serves as an incentive for drinking the soup. In joint families, by the time the children are old enough to know the trick played by their grandma, there is usually another group of kids ready to fall for it! They excite the kids, but the real nutrition lies not in the noodles but in the soup. The problems given in this book are like those noodles/cherries while solving all these problems are nutritious soup. Now it is your choice to drink the nutritious soups or not!!!.
