This work skeptically explores the notion that the internet will soon obviate any need for traditional print-based academic libraries. It makes a case for the library's staying power in the face of technological advancements (television, microfilm, and CD-ROM's were all once predicted as the contemporary library's heir-apparent), and devotes individual chapters to the pitfalls and prevarications of popular search engines, e-books, and the mass digitization of traditional print material.

Harbrace Guide to the Library and the Research Paper Scarecrow Press

Writing high-quality papers suitable for publication within international scientific journals is now an essential skill for all early-career researchers; their career progression and the reputation of the department in which they work depends upon it. However, many manuscripts are rejected or sent back for major re-working not because the science they contain is in any way 'bad', but because the same problems keep occurring in the way that the material is presented. It is one thing to write a good scientific paper, however it is quite another thing to get it published. This requires some additional nous. In writing this book Don Harris draws upon nearly a quarter of a century of experience as an author and reviewer of research papers, and ultimately as a journal editor. By his own admission, it contains all the things he wished that his mentors had told him 25 years ago, but didn't. The material in the book is drawn from many years of finding all these things out for himself, usually by trial and error (but mostly error!). The text adopts a much lighter touch than is normally found in books of this type - after all, who really wants to read a book about writing research papers? The author describes his own unique approach to writing journal papers (which, in his own words, has proved to be extremely successful). All major points are illustrated with examples from his own, published works. The book is written in the form of a manual for constructing a journal manuscript: read a chapter, write a section. However, the material it contains goes beyond just this and also describes how to select a target journal, the manuscript submission process, what

referees are looking for in a good journal paper, and how to deal with the referees' comments. Each chapter concludes with a checklist to ensure all the key elements have been addressed.

For the past two decades, scientists have urged us to abandon fossil fuels as rapidly as possible and pursue a range of other environmental reforms to avert the many crises climate change will bring. The reforms have not occurred at the expected rate, and their absence raises questions about when they might occur. In *Shocks, States, and Sustainability*, Thomas K. Rudel addresses this question. He outlines a theory of environmental revolutions and when they will likely occur through a comparison of radical environmental reforms throughout the 20th century. By looking at farmers in the American Dust Bowl, land-use planners in post-war England, small farmers in post-Soviet Cuba, and lobster fishers along the coast of Maine, Rudel emphasizes how sudden focusing events can spur radical reforms by providing a fresh realization about the scarcity of natural resources. *Shocks, States, and Sustainability* explains how earth-shaking events like droughts, depressions, and wars can provide the foundations necessary for the pursuit of global sustainability.
