**Understanding and Evaluating Research: A Critical Guide** aims to sensitize students to the necessity of learning how not to defer to the mysterious authority of the experts, but rather to learn how to be a critical consumer of others' research, and to gain confidence in their ability to be producers of research. Sue McGregor shows students how to be research literate, and how to find, critique and apply other people's scholarship. This textbook is grounded in a solid understanding of the prevailing research methodologies for creating new knowledge (philosophical underpinnings), which in turn dictate problem posing, theory selection, and research methods (tasks for sampling, collecting and analyzing data, and reporting results).

ICOLD Bulletin 159, Supplement to the Position Paper on Dams and the Environment, summarizes the role of dams in the future in the context of the global environmental changes which have become a significant issue in recent

years. Global problems such as climate change have impacts on dam safety. Dams can therefore be both affected by global problems and help provide solutions to these issues. And although the issue of dam safety in relation to global climate changes is very important, this topic will be addressed by ICOLD in other publications. Since the original publication, in 1997, of the Position Paper on Dams and the Environment was published, it is gratifying to note that worldwide progress has been made in the areas of water resource development and environmental challenges. These developments at the organizational level and the cited publications are only a few examples of global advances in environmentally sound development in general, and of water resources and dam developments in particular. However, they demonstrate that by agreeing on a set of common goals and working within a sustainable framework, individual dam projects can play a significant role in improving the everyday lives of millions of people.

Biophysics, being an interdisciplinary topic, is of great importance in modern biology. This book addresses the needs of biologists, biochemists, and medical biophysicists for an introduction to the subject. The text is based on a one-semester course offered to graduate students of life sciences, and covers a wide range of topics from quantum mechanics to pre-biotic evolution. To understand the topics, only basic school level mathematics is required. The first chapter introduces and refreshes the reader's knowledge of physics and chemistry. The next chapters cover various physico-chemical techniques used to study biomolecular structures, followed by treatments of spectroscopy, microscopy, diffraction, and computational techniques. X-ray crystallography and NMR are dealt with in greater detail. The latter half of the book covers results obtained from applications of the above techniques. Some of the other topics dealt with are energy pathways, biomechanics, and neuro-biophysics.

A little more than seventy-five years ago, Kate L. Turabian drafted a set of guidelines to help students understand how to write, cite, and formally submit research writing. Seven editions and more than nine million copies later, the name Turabian has become synonymous with best practices in research writing and style. Her Manual for Writers continues to be the gold standard for generations of college and graduate students in virtually all academic disciplines. Now in its eighth edition, **A Manual for Writers of Research Papers, Theses, and Dissertations** has been fully revised to meet the needs of today's writers and researchers. The Manual retains its familiar three-part structure, beginning with an overview of the steps in the research and writing process, including formulating questions, reading critically, building arguments, and revising drafts. Part II provides an overview of citation practices with detailed information on the two main scholarly citation styles (notes-bibliography and author-date), an array of source types with contemporary examples, and detailed guidance on citing online resources. The final section treats all matters of editorial style, with advice on punctuation, capitalization, spelling, abbreviations, table formatting, and the use of quotations. Style and citation recommendations have been revised throughout to reflect the sixteenth edition of *The Chicago Manual of Style*. With an appendix on paper format and submission that has been vetted by dissertation officials from across the country and a bibliography with the most up-to-date listing of critical resources available, **A Manual for Writers** remains the essential resource for students and their teachers.

Advanced Writing in English Elsevier Health Sciences

Gifted students have the potential to learn material earlier and faster, to handle more complexity and abstraction, and to solve complex problems better. This potential, however, needs stimulating experiences from home and school or it will not unfold. The books in the *Challenging Units for Gifted Learners* series are designed to help teachers provide the stimulating curricula that will nurture this potential in school. The units presented in this series are based on research into how these students actually think differently from their peers and how they use their learning styles and potential not merely to develop intellectual expertise, but to move beyond expertise to the production of new ideas. The *Social Studies* book includes units that

ask students to explore the struggles of America's first permanent English settlement in Jamestown, to hold an African economic summit, to study various Supreme Court cases and primary source documents, and to create a Civil War documentary that views the war from the perspective of a person living in a particular state.

This book focuses on the hidden but ever-present civil society dimension of the EU's policies towards Turkey and uncovers the pitfall of EU – Turkey relations. It establishes the growing depoliticization of Turkish civil society (in contrast to what the EU's policies aimed for) and engages with the questions of why and how Turkish civil society depoliticized. It discusses how Turkey's retreating democracy, and the intense polarization in Turkish political and social life make rights-based activism more difficult. Finally, this book investigates what implications Turkish civil society's depoliticization bears for EU – Turkey relations, reveals the diminishing leverage of the EU's policies and discusses how this reflects on Turkey's already closing civic space. It explains why and how EU-Turkey relations deteriorated over the last decade, examines the current stalemate, and discusses why civil society matters. This text will be of key interest to scholars and students in the field of EU – Turkey relations, Turkish studies and civil society studies as well as more broadly to NGOs, European studies and politics, and International Relations.
