Every day, millions of users log on to their favorite online forums and interact with others to get advice and discuss everything from the latest news and trends to their hobbies, professions, and whatever else strikes their fancy. Administrators have to lead these communities, deal with difficult users, and choose moderators. Legal constraints, spammers, and technical issues can turn the excitement of running an online community into chaos. With the right guidance, however, running forums can be a pleasure. Patrick O'Keefe has spent years developing and managing online communities. Now, he shows readers how to make the right decisions about every aspect of their forums, including:

- choosing a name and domain name
- picking the right software
- deciding on user options like avatars and private messaging
- setting guidelines and dealing with violators
- ensuring that posts stay on topic
- settling online disputes among users
- involving users and keeping the site interesting

Managing Online Forums is the one book that shows site owners and administrators how to create a safe and entertaining community that users will return to again and again.

One of the hottest topics in computer forensics today, electronic discovery (e-discovery) is the process by which parties involved in litigation respond to requests to produce electronically stored information (ESI). According to the 2007 Socha-Gelbmann Electronic Discovery Survey, it is now a \$2 billion industry, a 60% increase from 2004, projected to double by 2009. The core reason for the explosion of e-discovery is sheer volume; evidence is digital and 75% of modern day lawsuits entail e-discovery. A recent survey reports that U.S. companies face an average of 305 pending lawsuits internationally. For large U.S. companies (\$1 billion or more in revenue)that number has soared to 556 on average, with an average of 50 new disputes emerging each year for nearly half of them. To properly manage the role of digital information in an investigative or legal setting, an enterprise--whether it is a Fortune 500 company, a small accounting firm or a vast government agency--must develop an effective electronic discovery program. Since the amendments to the Federal Rules of Civil Procedure, which took effect in December 2006, it is even more vital that the lifecycle of electronically stored information be understood and properly managed to avoid risks and costly mistakes. This books holds the keys to success for systems administrators, information security and other IT department personnel who are charged with aiding the e-discovery process.

*Comprehensive resource for corporate technologists, records managers, consultants, and legal team members to the e-discovery process, with information unavailable anywhere else *Offers a detailed understanding of key industry trends, especially the Federal Rules of Civil Procedure, that are driving the adoption of e-discovery programs *Includes vital project management metrics to help monitor workflow, gauge costs and speed the process

A great church website is more about ministry than technology. Web-Empower Your Church offers step-by-step guidance to web implementers and other church leaders who are on the exciting journey to building an effective web ministry. Mark's engaging, conversational style makes technology accessible. He offers first-hand advice on every aspect of building an internet ministry: from assembling a team to designing and maintaining the website to adding powerful ministry features. "A first-hand account from one of the true pioneers of online ministry. Anyone interested in online ministry ought to read this book and learn from Mark's example." Andrew Careaga Author, eMinistry: Connecting with the Net Generation "A clear picture on the do's and don'ts of web ministry for churches. A must read for churches who want to effectively engage in web ministry." Walt Wilson Founder and Chairman, Global Media Outreach, a ministry of Campus Crusade for Christ "Stephenson has truly unleashed the power of internet ministry for your church. If you're looking for a readable and educating book on web-empowered ministry, look no further. This book is it. I can't believe how much I learned from my first reading. I will be returning to the book over and over." Bill Easum President, Easum, Bandy & Associates Mark Stephenson is Director of CyberMinistry and Technology of Ginghamburg Church, Tipp City, Ohio. He started the Ginghamburg CyberMinistry back in 1996 as an unpaid servant. Over the years, as the ministry grew, Mark joined the Ginghamburg staff, first part time and then full time. Currently, Ginghamburg Church has one of the largest and most innovative church internet ministries in the world, and the ministry remains unpaid-servant based and "home grown" (no outside companies or consultants have been hired). The website has received national acclaim -- from write-ups in the Wall Street Journal to the Dallas Morning News to Christian Computing Magazine, and television stories by WBNS Channel 10 in Columbus, Ohio and on Fox News. Visionary leaders like Bill Easum and Len Sweet champion it as a must-see website. Mark, the "Church CyberGuy," is also a well-known speaker on CyberMinistry as he conducts presentations and workshops around North America for such organizations as Leadership Network, United Methodist Communications, North American Christian Convention, Brethren in Christ Church of North America, and Miami University of Ohio. Mark has provided consulting support to numerous churches from around the world to help them develop their web ministries. His passion for helping churches led him to start and lead the Web-Empowered Church, a ministry of The Foundation for Evangelism, to develop free web-ministry software for churches and ministries worldwide.

Most applications in distributed computing center around a set of common subproblems. Distributed Systems: An Algorithmic Approach presents the algorithmic issues and necessary background theory that are needed to properly understand these challenges. Achieving a balance between theory and practice, this book bridges the gap between theoreticians and practitioners. With a set of exercises featured in each chapter, the book begins with background information that contains various interprocess communication techniques and middleware services, followed by foundational topics that cover system models, correctness criteria, and proof techniques. The book also presents numerous important paradigms in distributed systems, including logical clocks, distributed snapshots,

deadlock detection, termination detection, election, and several graph algorithms. The author then addresses failures and fault-tolerance techniques in diverse applications, such as consensus, transactions, group communication, replicated data management, and self-stabilization. He concludes with an exploration of real-world issues, including distributed discrete-event simulation and security, sensor networks, and peer-to-peer networks. By covering foundational matters of distributed systems and their relationships to real-world applications, Distributed Systems provides insight into common distributed computing subproblems.

In the Information Society, the smart card, or smart device with its processing power and link to its owner, will be the potential human representation or delegate in Ambient Intelligence (Pervasive Computing), where every appliance or computer will be connected, and where control and trust of the personal environment will be the next decade challenge. Smart card research is of increasing importance as the need for information security grows rapidly. Smart cards will play a very large role in ID management in secure systems. In many computer science areas, smart cards introduce new dimensions and opportunities. Disciplines like hardware design, operating systems, modeling systems, cryptography and distributed systems find new areas of applications or issues; smart cards also create new challenges for these domains. CARDIS, the IFIP Conference on Smart Card Research and Advanced Applications, gathers researchers and technologists who are focused in all aspects of the design, development, deployment, validation and application of smart cards or smart personal devices. This volume contains the 20 papers that have been selected by the CARDIS Program Committee for presentation at the 6th International Conference on Smart Card Research and Advanced Applications (CARDIS 2004), which was held in conjunction with the IFIP 18th World Computer Congress in Toulouse, France in August 2004 and sponsored by the International Federation for Information Processing (IFIP). With 20% of the papers coming from Asia, 20% from America, and 60% from Europe, the competition was particularly severe this year, with only 20 papers selected out of 45 very good submissions. Smart Card Research and Advanced Applications VI presents the latest advances in smart card research and applications, and will be essential reading for developers of smart cards and smart card applications, as well as for computer science researchers in computer architecture, computer security, and cryptography.

An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may have been developed internally. Examples of application types include enterprise resource planning (ERP), customer resource management (CRM), and point of sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance tracking, budgeting, forecasting and training.

In many cases, the organization is absolutely dependent that these applications be kept running. The importance of application administrators and the level to which organizations depend upon them is easily overlooked. Application Administrators Handbook provides an overview of every phase of administering an application, from working with the vendor before installation, the installation process itself, importing data into the application, handling upgrades, working with application users to report problems, scheduling backups, automating tasks that need to be done on a repetitive schedule, and finally retiring an application. It provides detailed, hands-on instructions on how to perform many specific tasks that an application administrator must be able to handle. Learn how to install, administer and maintain key software applications throughout the product life cycle Get detailed, hands-on instructions on steps that should be taken before installing or upgrading an application to ensure continuous operation Identify repetitive tasks and find out how they can be automated, thereby saving valuable time Understand the latest on government mandates and regulations, such as privacy, SOX, HIPAA, PCI, and FISMA and how to fully comply
