In Write Like This: Teaching Real World Writing Through Modeling and Mentor Texts, author and teacher Kelly Gallagher recognizes that writing well starts with teaching students WHY they should write. He believes we need to move beyond the state standards by introducing young writers to real-world discourses and provide them with authentic texts to influence and develop life-long skills. Each chapter focuses on a specific writing purpose: Express and Reflect: View life experiences in reverse to move forward Inform and Explain: State a point and purpose with information to support it Evaluate and Judge: Focus' on the worth of an object, idea, or person and present' it as 'bad or 'good Inquire and Explore: Propose' a problem or question Analyze and Interpret: Examine phenomena that are difficult to understand or explain Take a Stand/Propose a Solution: Persuade audience to particular position and provide' justification' ' In teaching these lessons, Gallagher provides mentor texts (professional samples as well as models he has written in front of his students), student writing samples, and numerous assignments and strategies proven to elevate student writing. By helping teachers bring effective modeling practices into their classrooms, Write Like This enables students to become better adolescent writers. More important, the practices found in this book will help our students develop the writing skills they will need to become adult writers in the real world. '

The Internet Revolution, like all great industrial changes, has made the world's elephantine media companies tremble that their competitors--whether small and nimble mice or fellow elephants--will get to new terrain first and seize its commanding heights. In a climate in which fear and insecurity are considered healthy emotions, corporate violence becomes commonplace. In the blink of an eye--or the time it has taken slogans such as "The Internet changes everything" to go from hyperbole to banality--"creative destruction" has wracked the global economy on an epic scale. No one has been more powerful or felt more fear or reacted more violently than Bill Gates and Microsoft. Afraid that any number of competitors might outflank them--whether Netscape or Sony or AOL Time Warner or Sun or AT&T or Linux-based companies that champion the open-source movement or some college student hacking in his dorm room--Microsoft has waged holy war on all foes, leveraging its imposing strengths. In World War 3.0, Ken Auletta chronicles this fierce conflict from the vantage of its most important theater of operations: the devastating second front opened up against Bill Gates's empire by the United States government. The book's narrative spine is United States v. Microsoft, the government's massive civil suit against Microsoft for allegedly stifling competition and innovation on a broad scale. With his superb writerly gifts and extraordinary access to all the principal parties, Ken Auletta crafts this landmark confrontation into a tight, character- and incident-filled courtroom drama featuring the best legal minds of our time, including David Boies and Judge Richard Posner. And with the wisdom gleaned from covering the converging media, software, and communications industries for The New Yorker for the better part of a decade, Auletta uses this pivotal battle to shape a magisterial reckoning with the larger war and the agendas, personalities, and prospects of its many combatants.

Reports of Internet plagiarism abound in the media. Some English teachers respond to these reports by discouraging or prohibiting Internet research in an era when most high school students prefer to do research online. Do high school students plagiarize more when they do Internet research and less when they do research in books and printed articles? To address this question, Chapter 1 reviews theoretical discussions and research findings on student plagiarism and the Internet. Chapter 2 reviews methods of data collection and categorization. Chapter 3 conveys the findings of the analysis of a sample of high school student research papers. The Chi-

square test of independence determined the relationship between the type of source (traditional print or Internet) from which students gathered information and the "acceptability" or "unacceptability" of individual passages from the papers, each traced to its source text and analyzed in terms of high school writing standards and citation practice. Contrary to what one would expect from reports of an Internet plagiarism "plague," Internet-based passages were less likely to contain incidents of textual unacceptability. Instead, print-based passages were more highly related to poor appropriation of source text, such as failures to cite paraphrased text or information, and failures to use quotation marks where needed. Furthermore, the findings reveal a deceptive citation practice not previously discussed in plagiarism literature which I coined "third party" fraud. Prevalent in this study's sample, third party fraud was found to be more strongly related to print-based passages than to Internet-based passages. Chapter 4 concludes the study with recommendations for teachers on high school research writing assignments. Recommendations are based on findings from the Chi-square analysis, interviews with student and teacher participants, and current pedagogical research. From the standpoint of organizational improvement, the key recommendation is that instead of discouraging or forbidding students from using the Internet in efforts to prevent plagiarism, schools should teach students reading and writing practices that help them engage with the thoughts of others and express them in an acceptable way, whether those thoughts are conveyed through traditional print or Internet-based sources.
