High and persistent levels of nonperforming loans (NPLs) have featured prominently in recent financial crises. This book traces NPL trends during and after crises, examines the economic impact of high NPLs, and compares the effectiveness of NPL resolution strategies across economies in Asia and Europe. The book distills important lessons from the experiences of economies using case studies and empirical investigation of ways to resolve NPLs. These findings can be invaluable in charting a course through the financial and economic fallout of the coronavirus disease (COVID-19) pandemic to recovery and sustained financial stability in Asia, Europe, and beyond.

In late 2008, the world's financial system was teetering on the brink of systemic collapse. While the impacts of the global financial crisis would be felt immediately, at every level of the economy, it would also send years-long aftershocks through investment, banking and regulatory circles worldwide. More than a decade after the worst year of the global financial crisis, what has been learned from its harsh lessons? Are governments and regulators more prepared for another financial system failure that would significantly affect the real economy? What may be the potential triggers for such a collapse to occur in the future? Systemic Risk in the Financial Sector: Ten Years after the Great Crash draws on some of the world's leading experts on financial stability and regulation to examine and critique the progress made since 2008 in addressing systemic risk.

The book covers topics such as central banks and macroprudential policies; fintech; regulators' perspectives from the United States and the European Union; the logistical and incentive challenges that impede standardization and collection; clearing houses and systemic risk; optimal resolution and bail-in tools; and bank leverage, welfare and regulation. Drawing on experts across disciplines — including Howell Jackson, John Geanakoplos, Charles Goodhart, Anat Admati, Roberta Romano and Martin Hellwig — Systemic Risk in the Financial Sector is the definitive guide to understanding the global financial crisis, the safeguards being put into place to try to avoid similar crises in the future, and the limitations of those safeguards.

This SDN revisits the debate on bank resolution regimes, first by presenting a simple model of bank insolvency that transparently describes the trade-off involved between bail-outs, bail-ins, and larger capital buffers. The note then looks for empirical evidence to assess the moral hazard consequences of bail-outs and the systemic spillovers from bail-ins.

Japan has made progress in improving its crisis readiness since the 2017 FSAP, and the authorities are committed to make further enhancements that are needed. Notably, the authorities have introduced loss absorbing capacity (LAC) requirements, expanded the recovery and resolution planning (RRP) perimeter to some degree, set up the Recovery and Resolution Planning Office (RRP Office), and revised the RRP guidelines for banks and financial market infrastructures (FMIs). They have also continued with annual reviews and updates of existing RRP, advanced the work in firm-specific crisis management groups (CMGs), contributed to the workings of international standard-setting bodies, and engaged in bilateral workshops with foreign counterparts. These improvements were built on a relatively comprehensive bank resolution regime, but hands-on experience with managing bank failures and financial crises is fading in Japan, while the financial system is evolving and getting more complex, putting a premium on accelerated and expanded crisis readiness efforts.
