101 Ready-To-Use Excel Macros Springer Nature  
The second edition of this best-selling Python book (over 500,000 copies sold!) uses Python 3 to teach even the technically uninclined how to write programs that do in minutes what would take hours to do by hand. There is no prior programming experience required and the book is loved by liberal arts majors and geeks alike. If you've ever spent hours renaming files or updating hundreds of spreadsheet cells, you know how tedious tasks like these

---

can be. But what if you could have your computer do them for you? In this fully revised second edition of the best-selling classic *Automate the Boring Stuff with Python*, you'll learn how to use Python to write programs that do in minutes what would take you hours to do by hand--no prior programming experience required. You'll learn the basics of Python and explore Python's rich library of modules for performing specific tasks, like scraping data off websites, reading PDF and Word documents, and automating clicking and typing tasks. The second edition of this international fan favorite includes a brand-new chapter on input validation, as well as tutorials on automating Gmail and Google Sheets, plus tips on automatically updating CSV files. You'll learn how to create programs that effortlessly perform useful feats of automation to:

- Search for text in a file or across multiple files
- Create, update, move, and rename files and folders
- Search the Web and download online content
- Update and format data in Excel spreadsheets of any size
- Split, merge, watermark, and encrypt PDFs
- Send email responses and text notifications
- Fill out online forms

Step-by-step instructions walk you through each program, and updated practice projects at the end of each chapter challenge you to improve those programs and use your newfound skills to automate similar tasks. Don't spend your time doing work a well-trained monkey could do. Even if you've never

---

written a line of code, you can make your computer do the grunt work. Learn how in *Automate the Boring Stuff with Python*, 2nd Edition.

American author Kurt Vonnegut has famously declared that writing is unteachable, yet formal education persists in that task. Teaching Writing as Journey, Not Destination is the culmination of P.L. Thomas's experiences as both a writer and a teacher of writing reaching into the fourth decade of struggling with both. This volume collects essays that examine the enduring and contemporary questions facing writing teachers, including grammar instruction, authentic practices in high-stakes environments, student choice, citation and plagiarism, the

five-paragraph essay, grading, and the intersections of being a writer and teaching writing. Thomas offers concrete classroom experiences drawn from teaching high school ELA, first-year composition, and a wide range of undergraduate and graduate courses. Ultimately, however, the essays are a reflection of Thomas's journey and a concession to both writing and teaching writing as journeys without ultimate destinations. Altova® XMLSpy® 2012 User & Reference Manual Cengage Learning The purpose of this book is to introduce the reader to

---

the basic theory of signal detection and estimation. It is assumed that the reader has a working knowledge of applied probability and random processes such as that taught in a typical first-semester graduate engineering course on these subjects. This material is covered, for example, in the book by Wong (1983) in this series. More advanced concepts in these areas are introduced where needed, primarily in Chapters VI and VII, where continuous-time problems are treated. This book is adapted from a one-

semester, second-tier graduate course taught at the University of Illinois. However, this material can also be used for a shorter or first-tier course by restricting coverage to Chapters I through V, which for the most part can be read with a background of only the basics of applied probability, including random vectors and conditional expectations. Sufficient background for the latter option is given for example in the book by Thomas (1986), also in this series. *MOS 2010 Study Guide*
