A time when deception leads to truth, and victory comes from surrender...

The life of a rogue isn't always easy, especially for a woman. But Brigid isn't just any woman. She's intelligent, agile, and spirited – and determined to discover the secrets of her questionable past. Her only clue is a pendant in the shape of a black and silver dragon; the same design worn by the King's Guard. She's convinced her answer lies in the heart of the kingdom, and she's willing to do whatever it takes to get there. Even if it means chopping off her raven locks and binding her curvy, petite figure to refashion herself as a scruffy lad to join their ranks. Knight Roran McShane's search for new recruits brings him to the far reaches of the kingdom. Only a select few prove worthy, but the pluck and determination of one particularly small but feisty lad moves Roran to do something he has never done before – take on a squire. The mute lad proves to be resourceful and skilled, even if he is rather odd and shunned by the others. Roran is forced to second-guess his decision when he begins to feel unnaturally protective of the boy. When his

squire's deception is revealed, he is both relieved and appalled by the knowledge that he is really a she, and far from a child. Honor and ethics require that he sever all ties, but Roran soon learns that is easier said than done. The lass is no sheltered lady waiting to be rescued and before she's done, she'll surprise Roran, the knights-in-training, even the king himself. For a warrior's heart knows no bounds.

A great silence has settled upon a drowned world. In the final battle of their final war, the massive citysubs Universalis and Population reduced each other to ruins. One lays wrecked on the seafloor. The other, beached and lifeless, litters the island of pristine polar ice it tried to destroy. Pockets of survivors huddle together. On the frigid surface, Ralla Gattley and Thom Vargas cling to life and each other. Below, the soldier Geran Lo fights relentlessly to free trapped and drowning civilians. As they struggle against a world determined to kill them, a new and even more dangerous menace approaches. Undersea Atrophia is the second book in the Undersea Saga.

In the last few years multimedia hardware and applications have become widely available on PC and workstations. Moreover, through the tremendous development and the wide usage of the World Wide Web multimedia applications have been brought over the network to many people. This book presents the results of the fourth in a well established series of international workshops on Multimedia organized by the EUROGRAPHICS Association, and held from May 28 to 30, 1996, in Rostock, Germany. The workshop had the special topic Multimedia on the Net and was the follow up of the EUROGRAPHICS Symposium and Workshop on Multimedia held in Graz in June 1994. The workshop program consisted of an invited keynote speech and five technical sessions. The fifteen contributions selected for this volume treat topics of particular interest in current research and address actual problems of the use of multimedia in distributed applications over the network. According to the technical sessions they can be roughly structured in the parts concepts for handling multimedia data, still and motion pictures on the net, WWW and multimedia, collaborative multimedia, and multimedia and education. Concepts for handling multimedia data are addressed in two contributions. The first treats a frame based presentation model for distributed information systems (Kirste), the other one presents a temporal logic formalism for specifying navigational transformation in hypermedia applications (Mere et al.).

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by

---

infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center
