This book provides real stories about the South Korean semiconductor community. It explores the lives and careers of six influential semiconductor engineers who all studied at Korea Advanced Institute of Science and Technology (KAIST) under the mentorship of Dr. Kim Choong-Ki, the most influential semiconductor professor in South Korea

during the last quarter of the twentieth century. Kim ' s students became known as " Kim ' s Mafia " because of the important positions they went on to hold in industry, government, and academia. This book will be of interest to semiconductor engineers and electronics engineers, historians of science and technology, and scholars and students of East Asian studies. " They were called ' Kim ' s Mafia. ' Kim Choong-Ki himself wouldn ' t have put it that way. But it was true what semiconductor engineers in South Korea whispered about his former students: They were everywhere. ... Kim was the first professor in South Korea to systematically teach semiconductor engineering. From 1975, when the nation had barely begun producing its first transistors, to 2008, when he retired from teaching, Kim

trained more than 100 students, effectively creating the first two generations of South Korean semiconductor experts. " (Source: IEEE Spectrum, October, 2022.)

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no

substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of

designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

If you're comfortable using the basic features of Lightroom, but really want to push the envelope with this powerful software, 'Inside Lightroom' by acclaimed photographer and Lightroom Beta-tester Richard Earney is a must-have. Bypassing the obvious features covered in a variety of existing Lightroom books, Richard focuses on customizing Lightroom to suit your workflow. For example, he covers using presets to automate the way Lightroom deals with photos, optimizing your Lightroom workflow

for your own hardware and preferences. He covers sophisticated calibration techniques, helping you render your pictures accurately both onscreen and in print. Basically -- the hidden information for this powerful software. Unlike the other 'guides' on the market, this book doesn't tell you what you already know. Instead, it focuses on what you don't. 'Inside Lightroom' also showcases the brand-new features of the software, available only in Lightroom 2.0, so if you have recently upgraded from Lightroom 1, this book will help you reap the benefits of your investment. Practical, jargon-free and full of stunning images, Richard Earney's book should be on the shelf of every Lightroom user.

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of

Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".
