This publication is the outcome of work of the UNECE Group of Experts on Euro-Asian Transport Links (EATL) in phase III of the project (2013-2017). The report was drafted by a consultant from the Scientific and Research Institute of Motor Transport (NIIAT) in Moscow and is focused both at coordination and facilitation of financing of infrastructural projects, as well as facilitating and removing physical and administrative bottlenecks at border crossings in overland transport between Europe and Asia. The report is a particularly useful tool for transport policy-

makers from Landlocked Developing Countries (LLDCs) and transit countries in the Euro-Asian region and beyond, in that it, inter alia: i) Identifies and describes main commodity groups for the transport of which inland modes of transport can compete with maritime and aviation modes (incl. non-containerized, containerized and high-value containerized cargo); ii) Provides analysis showing the economic advantage (in terms of time and costs) of inland routes compared to air or maritime routes; and iii) Identifies the current strengths and weaknesses and lists several

recommendations to make inland routes more competitive vis-à-vis the other modes. The EATL project's principal value to the market is that it paved the way for the operation of container "block trains". The development of the block trains, the so called "highways of railways" made the Euro-Asian corridors operational, serving as a regular mechanism controlled by the market that evaluates the service levels and requests for greater facilitation, cooperation and investment.

The handbook focuses on a complete outline of lithium-

ion batteries. Just before starting with an exposition of the fundamentals of this system, the book gives a short explanation of the newest cell generation. The most important elements are described as negative / positive electrode materials, electrolytes, seals and separators. The battery disconnect unit and the battery management system are important parts of modern lithium-ion batteries. An economical, faultless and efficient battery production is a must today and is

represented with one chapter in the handbook. Cross-cutting issues like electrical, chemical, functional safety are further topics. Last but not least standards and transportation themes are the final chapters of the handbook. The different topics of the handbook provide a good knowledge base not only for those working daily on electrochemical energy storage, but also to scientists, engineers and students concerned in modern battery systems.

This textbook discusses the

most important theories of internationalization, including Product Life-Cycle, Internalization, Location, Eclectic Paradigm, Uppsala, Network, and International New Venture concepts. These models are grounded to a considerable extent in the Transaction Cost Theory and the Resource-Based View as explained and illustrated in the book. Relevant market entry strategies, such as franchising, contract manufacturing, joint ventures, and others are

explained and categorized in light of crucial determinants of international business decision making: hierarchical control of operations, the firm's proximity to the foreign market, the investment risk, and the factor of time. What makes this textbook novel and unique? Its framework combines theories and market entry strategies: each topic is applied to authoritative, real-life business case studies. Complex issues are explained in a manner that results in understanding. Various illustrations and tables help the reader comprehend the point being discussed. The case study focus on Asian firms delivers interesting insights into modern high-technology industries and changing global business dynamics. Market Entry Strategies serves as a vital source for internationally oriented bachelor, master, and MBA programs with strategy, marketing, and management lecture modules. Consequently, this publication is highly recommended for students and scholars; but it is also useful for business practitioners seeking to gain competitive advantages in international business. About the Author Mario Glowik teaches Bachelor, MBA and Master courses in Strategic management, International management, Strategic management in China and Europe, and International and Asian business at Berlin School of Economics and Law in Berlin.
