The objective of this book is to explain computing today in a clear and meaningful way and to focus on those concepts likely to have the greatest impact as we approach the next century and the next phase of the

information revolution. The unique applicability of computers to business and to life is demonstrated, the advantage gained by knowing how and when to use computers, and the potential of computers to enrich our life.

Advancements in technology regularly influence the healthcare field and developing aspects on medical patient safety.

Implementing electronic health records, decision support systems, and computerized physician order entry systems reduces risk in the potential for e-health to make errors leading to adverse events. E-Health Technologies and Improving Patient Safety: Exploring Organizational Factors presents an overview on information and communication technologies and addresses the impacts on

the field of both patient safety and e-health. This book offers insightful perspectives and concentrated research on concepts related to these areas, as well as issues and current trends in patient safety in e-health.

We know much more about the global politics of intellectual property than we do about national political contests over the ownership of knowledge. Haunss and Shadlen have identified this gap in the literature and have done a fine job of bringing together a set of essays that helps to fill this gap in our understanding of the multi-layered nature of intellectual property politics. Peter Drahos, The Australian National University, Canberra This thought-provoking volume provides invaluable new insights and is a major contribution to the debate on the politics of intellectual property rights. Duncan Matthews, Queen Mary, University of London, UK This book offers empirical analyses of conflicts over the ownership, control, and use of knowledge and information in developed and developing countries. Sebastian Haunss and Kenneth C. Shadlen, along with a collection of eminent contributors, focus on how business organizations, farmers, social movements, legal communities, state officials, transnational enterprises, and international organizations shape IP policies in areas such as health, information-communication technologies, indigenous knowledge, genetic resources, and many others. The innovative and original chapters examine conflicts over the rules governing various

dimensions of IP, including patents, copyrights, traditional knowledge, and biosafety regulations. Written from a political perspective, this book is a must-read for political scientists, sociologists and anthropologists who study IP and conflicts over property. It is also an essential read for stakeholders in institutions, NGOs and industry interested in knowledge governance and IP politics.

Branding guru Aaker shows how to eliminate the competition and become the lead brand in your market This ground-breaking book defines the concept of brand relevance using dozens of case studies- Prius, Whole Foods, Westin, iPad and more-and explains how brand relevance drives market dynamics, which generates opportunities for your brand and threats for the competition. Aaker reveals how these companies have made other brands in their categories irrelevant. Key points: When managing a new category of product, treat it as if it were a

brand; By failing to produce what customers want or losing momentum and visibility, your brand becomes irrelevant; and create barriers to competitors by supporting innovation at every level of the organization. Using dozens of case studies, shows how to create or dominate new categories or subcategories, making competitors irrelevant Shows how to manage the new category or subcategory as if it were a brand and how to create barriers to competitors Describes the threat of becoming irrelevant by failing to make what customer are buying or losing energy David Aaker, the author of four brand books, has been called the father of branding This book offers insight for creating and/or owning a new business arena. Instead of being the best, the goal is to be the only

brand around-making competitors irrelevant.

Passenger Train Emergency Preparedness (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the Passenger Train Emergency Preparedness (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 FRA is amending its existing regulation entitled Passenger Train Emergency Preparedness by revising or clarifying various provisions. The final rule clarifies that railroad personnel who communicate or coordinate with first responders during emergency situations must receive certain initial and periodic training and be subject to operational tests and inspections related to the railroad's emergency preparedness plan. The final rule also clarifies that railroads must develop procedures in their emergency preparedness plans that specifically address the safety of passengers with disabilities during actual and simulated emergency situations, such as during train evacuations. The rule also limits the need for FRA to formally approve certain purely administrative changes to approved emergency preparedness plans. In addition, the final rule requires that operational tests and inspections be conducted in accordance with a program that meets certain minimum requirements. Finally, the rule

removes as unnecessary the provision discussing the preemptive effect of the regulations. The development of micro- and nano-mechanical systems (MEMS and NEMS) foreshadows momentous changes not only in the technological world, but in virtually every aspect of human life. The future of the field is bright with opportunities, but also riddled with challenges, ranging from further theoretical development through advances in fabrication technologies, to developing high-performance nano- and microscale systems, devices, and structures, including transducers, switches, logic gates, actuators and sensors. MEMS and NEMS: Systems, Devices, and Structures is designed to help you meet those challenges and solve fundamental, experimental, and applied problems. Written from a multi-disciplinary perspective, this book forms the basis for the synthesis, modeling, analysis, simulation, control, prototyping, and fabrication of MEMS and NEMS. The author brings together the various paradigms, methods, and technologies associated with MEMS and NEMS to show how to synthesize, analyze, design, and fabricate them. Focusing on the basics, he illustrates the development of NEMS and MEMS architectures, physical representations, structural synthesis, and

optimization. The applications of MEMS and NEMS in areas such as biotechnology, medicine, avionics, transportation, and defense are virtually limitless. This book helps prepare you to take advantage of their inherent opportunities and effectively solve problems related to their configurations, systems integration, and control.

Sadie looked out the window and saw Lawrence. She hurried to welcome him. That was the man that she would marry. The only thing that worried her a little was that her parents were not in favor of the marriage. She didn't know why. They never said anything, but she could tell. Well, when they were married an everything worked out, they'd change their mind at least she hoped so.

e-Learning Ecologies explores transformations in the patterns of pedagogy that accompany e-learning—the use of computing devices that mediate or supplement the relationships between learners and teachers—to present and assess learnable content, to provide spaces where students do their work, and to mediate peer-to-peer interactions. Written by the members of the "new learning" research group, this textbook suggests that e-learning ecologies may play a key part in shifting the systems of modern education, even as technology itself is pedagogically neutral. The chapters in this book aim to create an analytical framework with which to differentiate

those aspects of educational technology that reproduce old pedagogical relations from those that are genuinely innovative and generative of new kinds of learning. Featuring case studies from elementary schools, colleges, and universities on the practicalities of new learning environments, e-Learning Ecologies elucidates the role of new technologies of knowledge representation and communication in bringing about change to educational institutions.

Earth Day celebrates our beautiful planet and calls us to act on its behalf. Some people spend the day planting flowers or trees.

Others organize neighborhood clean-ups, go on nature walks, or make recycled crafts.

Readers will discover how a shared holiday can have multiple traditions and be celebrated in all sorts of ways.

The advent of Internet of Things offers a scalable

and seamless connection of physical objects, including human beings and devices. This, along with artificial intelligence, has moved transportation towards becoming intelligent transportation. This book is a collection of eleven articles that have served as examples of the success of internet of things and artificial intelligence deployment in transportation research. Topics include collision avoidance for surface ships, indoor localization, vehicle authentication, traffic signal control, path-planning of unmanned ships, driver drowsiness and stress detection, vehicle density estimation, maritime vessel flow forecast, and vehicle license plate recognition. High-performance computing services have become more affordable in recent years, which triggered the adoption of deep-learning-based approaches to increase the performance standards of artificial intelligence models. Nevertheless, it has been pointed out by various researchers that traditional shallow-learning-based approaches usually have an advantage in applications with small datasets. The book can provide information to government officials, researchers, and practitioners. In each article, the authors have summarized the limitations of existing works and offered valuable information on future research directions.

Featuring a new code of ethics for journalists and essays by 14 journalism thought leaders and practitioners, *The New Ethics of Journalism: Principles for the 21st Century*, by Kelly McBride and Tom Rosenstiel, examines the new pressures brought to bear on journalism by technology and changing audience habits. It offers a new framework for making critical moral choices, as well as case studies that reinforce the concepts and principles rising to prominence in 21st century communication. The book addresses the unique problems facing journalism today, including how we arrive at truth in an era of abundant and unverified information; the evolution of new business models and partnerships; the presence of journalists on independent social media platforms; the role of diversity; the meaning of stories; the value of images; and the role of community in the production of journalism.

This first volume in the series on nanocarbons for advanced applications presents the latest achievements in the design, synthesis, characterization, and applications of these materials for electrochemical energy storage. The highly renowned series and volume editor, Xinliang Feng, has put together an internationally acclaimed expert team who covers nanocarbons such as carbon nanotubes, fullerenes, graphenes, and porous carbons. The first two parts focus on nanocarbon-based anode and cathode materials for lithium ion batteries, while the third part deals with carbon material-based supercapacitors with various applications in power electronics, automotive engineering and as energy storage elements in portable electric devices. This book will be indispensable for materials scientists, electrochemists, physical chemists, solid state physicists, and those working in the electrotechnical industry.

This book aims to provide clinicians and other practitioners and professionals with up-to-date information on how to evaluate and manage headaches in children and adolescents, highlighting the most recent recommendations. Unlike in other books on the subject, detailed attention is devoted to the various comorbidities commonly associated with headache, including psychiatric comorbidities such as depression, anxiety, attention deficit hyperactivity disorder, and learning disabilities and medical conditions such as epilepsy, vascular disorders, brain tumors, atopic disease, and obesity. The intimate link between these conditions and headache is explained with a view to enabling the reader to recognize their presence and, on that basis, to institute the most effective pharmacological or non-pharmacological treatment strategy. Moreover, knowledge of the comorbidities associated with headache will help readers to understand more fully the causes of this serious disorder and also its consequences, e.g., for school performance, relationships, and daily activities. The authors are all international experts who care for children with headache or the other described disorders.

A single volume that gathers together three of the most remarkable novels from Jean Echenoz, the

“ most distinctive French voice of his generation ” (The Washington Post), Three by Echenoz demonstrates the award-winning author ’ s extraordinary versatility and elegant yet playful style at its finest. “ A parodic thriller sparkling with wit ” (L ’ Humanit é), Big Blondes probes our universal obsession with fame as a television documentary producer tries to track down a renowned singer who has mysteriously disappeared. A darkly comedic, noir-style tour de force, it finally answers the age-old question: do blondes have more fun? “ Fluid, never forced...like a garment that fits beautifully even inside-out ” (Elle), Piano brings Dante ’ s Inferno to contemporary Paris, following Max Delmarc, a concert pianist suffering from paralyzing stage fright and alcoholism, as he meets his untimely death and descends through purgatory—part luxury hotel, part minimum-security prison—into a modern vision of hell. Running is “ a small wonder of writing and humanity ” (L ’ Express)—a portrait of the legendary Czech athlete Emil Zátopek, who became a national hero, winning three gold medals at the 1952 Helsinki Olympics even as he was compelled to face the unyielding realities of life under an authoritarian regime.
