Named one of "10 Must-Read Career and Leadership Books For 2022" by Forbes The ultimate guide to the essentials of strategy and management, from one of the world's top business thinkers. Over a stellar career, Roger Martin has advised the CEOs of some of the world's most successful companies. From the beginning, he noted that almost every executive he talked to had a "model"—a framework or way of thinking that guided their strategy and activities. But these models tended to become automatic, so much so that when one didn't work, the typical response was just to apply it again—with greater enthusiasm. Martin took a fresh, critical approach to helping. When company leaders came to him with fundamental

questions—How do you decide where to play and how to win? What is the key to shaping and changing corporate culture? How can you design a successful, sustainable innovation process?—his first response was to break the spell of the current model with a memo articulating a new way to think about the problem at hand and a more powerful and effective way to successfully overcome it. Over time, these ideas worked their way into Martin's many Harvard Business Review articles. Now, for the first time, they appear together in *A New Way to Think*. With his trademark incisive intellect and clarity, Martin covers the entire breadth of the management landscape—illuminating the true nature of competition, explaining how company success revolves around customers, revealing how strategy and execution are really the same thing, and much more. Reading like a series of one-on-one sessions with one of the world's leading business thinkers, *A New Way to Think* is an essential guide for any current or aspiring business leader.

High-Density and De-Densified Smart Campus Communications Design, deliver, and implement high-density communications solutions High-density campus communications are critical in the operation of densely populated airports, stadiums, convention centers, shopping malls, classrooms, hospitals, dense smart cities, and more.

They also drive Smart City and Smart Building use cases as High-Density Communications (HDC) become recognized as an essential fourth utility.

However, the unique requirements and designs demanded by HDC make implementation challenging. In *High-Density and De-Densified Smart Campus Communications: Technologies, Integration, Implementation and Applications*, a team of experienced technology strategists delivers a one-of-a-kind treatment of the requirements, technologies, designs, solutions, and trends associated with HDC. From the functional requirements for HDC and emerging data/Wi-Fi 6/internet access/5G cellular/OTT video, and IoT automation—including pandemic-related de-densification—to the economics of broad deployment of HDC, this book includes coverage of every major issue faced by the professionals responsible for the design, installation, and maintenance of high-density communication networks. It also includes: A thorough introduction to traditional and emerging voice/cellular design for campus applications, including the Distributed Antenna System (DAS) Comprehensive explorations of traditional sensor networks and Internet of Things services approaches Practical

discussions of high-density Wi-Fi hotspot connectivity and related technologies, like Wi-Fi 5, Wi-Fi 6, spectrum, IoT, VoWiFi, DASs, microcells issues In-depth examinations of de-densification, office social distancing, and Ultra-Wideband (UWB) technologies Perfect for telecommunication researchers and engineers, networking professionals, technology planners, campus administrators, and equipment vendors, *High-Density Smart Campus Communications* will also earn a place in the libraries of senior undergraduate and graduate students in applied communications technologies.

Internet of Things (IoT) security deals with safeguarding the devices and communications of IoT systems, by implementing protective measures and avoiding procedures which can lead to intrusions and attacks. However, security was never the prime focus during the development of the IoT, hence vendors have sold IoT solutions without thorough preventive measures. The idea of incorporating networking appliances in IoT systems is relatively new, and hence IoT security has not always been considered in the product design. To improve security, an IoT device that needs to be directly accessible over the Internet should be segmented into its

own network, and have general network access restricted. The network segment should be monitored to identify potential anomalous traffic, and action should be taken if a problem arises. This has generated an altogether new area of research, which seeks possible solutions for securing the devices, and communication amongst them.
