Lloyd ' s Register OneOcean ' s Guide to Port Entry 1995-96 Latvia-Zaire Routledge

In the age of modern warfare the changing landscape of the 21st century battlefield has demanded a transformation within the US Marine Corps Special Operations. Adapting to a huge range of combat environments, an enormous array of specialist uniforms, protective armour and battlefield electronic devices have been developed to facilitate missions in the most extreme conditions. A special forces operator may now have available to him a dozen distinct types of body armour and two dozen different weapons; never before in American military history has so much been given to so few. Authored by J. Kenneth Eward, professor at the American Military University, and illustrated throughout with photographs and meticulous colour plates, this

volume offers the first detailed, authoritative study of the characteristics, and performance in the field, of the most modern combat gear and weapons provided for USMC specialist operators to date.

The approach throughout is both legal multi-disciplinary and comparative. The relevant international conventions are examined (particularly the 'Bunker Convention' of 2008), with particular attention to their implementation in China and Europe, as well as the independent US regime. In addition, detailed empirical data from well-known case studies provide important insights into the working of international and national prevention and compensation mechanisms.

This book addresses the fundamental question why and under which conditions Korean firms increased their investment so heavily in the EU after 1986 and why they and not the Korean government took the initiative in the decision-making process. The author contends that the main reason for the firm's departure from government policy is the belief of the Korean government that national competitiveness, which largely affects the country's standard of living, is determined by the success of local firms in global competition. The author substantiates his argument by supplying comprehensive surveys of twenty-six Korean

consumer electronics firms and concomitant interviews with senior managers in nine of these. The empirical material suggests that Korean consumer electronics firms were principally motivated by their need to seek market security through a 'globalization' strategy.

This book discusses the experience of enterprise transformation and upgrading and the role of government in promoting this dramatic change in Asian emerging economies. The author specifically explores the direction, influencing factors, paths and modes of enterprise transformation and upgrading by conducting intensive case studies on a number of enterprises having accomplished upgrading in mainland China and Taiwan, and draws experience and

---

lessons from them. These theoretical and practical insights have great significance for Chinese enterprises in improving their ability to respond to drastic external changes and provide useful reference for the formulation of government policies.

“ A compelling portrait of the future and vividly relates the big challenges facing the world now. ” —Jared Diamond, New York Times bestselling author of *Collapse and Guns, Germs, and Steel* The world's population is exploding, wild species are vanishing, and our environment is degrading. What kind of world are we leaving for our children and grandchildren? Just who will flourish—and who will fail—in our evolving world? Combining the lessons of geography and history with state-of-the-art model projections and analytical data, Guggenheim fellow Laurence C. Smith predicts how the eight nations of the

Arctic Rim (including the United States) will become increasingly powerful while the nations around the equator struggle for survival. Like Bjorn Lomborg's *The Skeptical Environmentalist*, *The World in 2050* is as credible as it is controversial, projecting the looming benefits as well as the problems of climate change.

Liquefied natural gas (LNG) is a commercially attractive phase of the commodity that facilitates the efficient handling and transportation of natural gas around the world. The LNG industry, using technologies proven over decades of development, continues to expand its markets, diversify its supply chains and

increase its share of the global natural gas trade. The Handbook of Liquefied Natural Gas is a timely book as the industry is currently developing new large sources of supply and the technologies have evolved in recent years to enable offshore infrastructure to develop and handle resources in more remote and harsher environments. It is the only book of its kind, covering the many aspects of the LNG supply chain from liquefaction to regasification by addressing the LNG industries' fundamentals and markets, as well as detailed engineering and design principles. A unique, well-documented, and forward-thinking work, this reference book provides an ideal platform for scientists, engineers, and other professionals involved in the LNG industry to gain a better understanding of the key basic and advanced topics relevant to LNG
