Enchanted Parapet is the tale of a wedding planner's journey to the truth when she sees startling visions of her clients' past life together that she must decipher before disaster strikes. Bryn is co-owner of Anything Goes, a wedding planning company like no other. After seeing an ad for a romantic castle in the Shetland Islands, she snaps it up for her engaged clients without a second thought. But Bryn arrives to find the castle in disrepair, leaving her and her younger business partner, Jamie, only a week to transform the crumbling structure into an idyllic wedding venue. Unfortunately, planning the wedding is not their only challenge. Bryn has been having visions of the couple's past life together that are slowly revealing unfinished karma that must be resolved before a catastrophe unfolds. She follows these startling revelations back in time to weave together clues as she unravels the history threatening the couple's future. Plagued with visions of a Viking battle and a love triangle, Bryn must now piece together the couple's former life in ninth century Scotland. All the while, Bryn and Jamie are battling their own trials trying to deliver a storybook wedding.

Spanning the fifth century to the sixteenth, and ranging from Afghanistan to Spain, this unique collection provides a profound insight into the sheer vitality and depth of Classical Arabic literature. From the earliest surviving fragments of The Thousand and One Nights to the elegant beauty and profound power of the Qur'an - believed by the Islamic faith to contain the actual words of Allah - it includes translated extracts from all the major works of the period, alongside many less well-known but equally fascinating pieces. Exploring such traditional themes as lovesick yearning and fated doom, and considering subjects as diverse as the etiquette of falling in love with slave-girls and the terrors of the sea, this compelling anthology of poetry and prose brilliantly illuminates a body of writing that has been unjustly neglected by the west for centuries.

First published in 1985, Mary Douglas intended *Risk and Acceptability* as a review of the existing literature on the state of risk theory. Unsatisfied with the current studies of risk, which she found to be flawed by individualistic and psychologistic biases, she instead uses the book to argue risk analysis from an anthropological perspective. Douglas raises questions about rational choice, the provision of public good and the autonomy of the individual.

The first chapter of this book traces the history of the development of walking machines from the original ideas of man-amplifiers and military rough-ground transport to today's diverse academic and industrial research and development projects. It concludes with a brief account of research on other unusual methods of locomotion. The heart of the book is the next three chapters on the theory and engineering of legged robots. Chapter 2 presents the basics of land locomotion, going on to consider the energetics of legged movement and the description and classification of gaits. Chapter 3, dealing with the mechanics of legged vehicles, goes into leg number and arrangement, and discusses mechanical design and actuation methods. Chapter 4 deals with analysis and control, describing the aims of control theory and the methods of modelling and control which have been used for both highly dynamic robots and multi-legged machines. Having dealt with the theory of control it is necessary to discuss the computing system on which control is to be implemented. This is done in Chapter 5, which covers architectures, sensing, algorithms and programming languages. Chapter 6 brings together the threads of the theory and engineering discussed in earlier chapters and summarizes the current walking machine research projects. Finally, the applications, both actual and potential, of legged locomotion are described. Introduction Research into legged machines is expanding rapidly. There are several reasons why this is happening at this particular time.
