Trade policy has played a vital role in the decline of European electronics business. The events that resulted in the disappearance of the European television industry, of a European and Japanese video recorder format and of other European consumer electronics are

directly related to market structures in exporting countries and business practices. In this book, factual business data shows and economic models explain how restrictive trade practices result in elimination of efficient competitors in export markets. It deals with the memorable case how a videocassette recorder format was established by dumping and how politics enabled it. An innovative tariff

increase for CD players was invalidated by heavy dumping, causing closure of production in Europe. European CTV industry succumbed under permanent dumping and a series of biases – as the interest of a state-owned company – and serious errors making trade instruments void and rules irreconcilable with international agreements. Practical and theoretical examples and explanations, some in detail, of

trade rules are provided. The book sketches events – carelessness, prejudice or special interests, arbitrary and false application of trade instruments and fraud – resulting in disappearance of various European electronics business segments.

Twenty years ago, few people would have predicted that Samsung could transform itself from a low-cost original equipment manufacturer to a world leader in R&D, marketing, and design, with a brand more valuable than Pepsi, Nike, or American Express. Based on ten years of research inside Samsung and interviews with 80 of Samsung's top executives, The Samsung

Way tells the compelling story of how Samsung has grafted Western business practices onto its essentially Japanese system, combining its low-cost manufacturing prowess with an ability to bring high-quality, high-margin branded products swiftly to market.
