Prime Minister Malcolm Turnbull celebrates Australia as 'the most successful multicultural nation in the world'. This is a grand claim and important to a sense of identity and belonging, but

at times it seems that multiculturalism is more an article of faith than a work in progress. What it really means in the twenty-first century is the focus of Griffith Review 61: Who We Are, which will examine both the opportunities offered and the complexities involved. The nation's population has virtually doubled since 1975, and in recent years the rules around migration have been altered significantly. Those who have chosen to make their home here in the past

---

have changed Australia, and waves of new arrivals continue to transform the country. Yet the apparent certainties of Australia as a permanent settler society are giving way to the precarious churn of temporary migration. This edition will give voice to this changing reality, explore the big issues of belonging, citizenship and participation, and tease out how contemporary Australia might evolve. This is a rich field, replete with policy questions and

personal narratives. It is a success story, but the full picture is complex, and past achievements no guarantee of future results. The nation 's boundaries are imaginary as much as physical, and constantly contested by an unsettled history and a shifting present. Renewed assertions of national identity run parallel to the increasing globalisation of opportunity and threat, as if the more fluid the world becomes, the greater the urge to hold onto something fixed

and stable. Yet do we really know who ' we ' are? Where does Australia begin and end? Who can claim to belong and who can be legitimately excluded? Julianne Schultz AM FAHA is the founding editor of Griffith Review, the award-winning literary and public affairs quarterly journal. Bogle tells—for the first time—the story of a place both mythic and real: Black Hollywood. Spanning sixty years, this deliciously entertaining history uncovers the audacious manner in which many blacks made a place for themselves in an industry that originally had no place for them. Through interviews and the personal recollections of Hollywood luminaries, Bogle pieces together a remarkable history that remains largely obscure to this day. We discover that Black Hollywood was a place distinct from the studio-system-dominated Tinseltown—a world unto itself, with unique rules and social hierarchy. It had its own talent scouts and media, its own watering holes, elegant hotels, and fashionable nightspots, and of course its own glamorous and brilliant personalities. Along with famous actors including Bill “Bojangles” Robinson, Hattie McDaniel (whose home was among Hollywood’s most exquisite), and, later, the stunningly beautiful Lena Horne and the fabulously gifted Sammy Davis, Jr., we meet the likes of heartthrob James Edwards, whose promising career was derailed by whispers of an affair with Lana Turner, and the mysterious Madame Sul-Te-Wan, who shared a close lifelong friendship with pioneering director D. W. Griffith. But Bogle also looks at other members of the black community—from the white stars’

black servants, who had their own money and prestige, to gossip columnists, hairstylists, and architects—and at the world that grew up around them along Central Avenue, the Harlem of the West. In the tradition of Hortense Powdermaker’s classic Hollywood: The Dream Factory and Neal Gabler’s An Empire of Their Own, in Bright Boulevards, Bold Dreams, Donald Bogle re-creates a vanished world that left an indelible mark on

The overwhelming majority of a software system’s lifespan is spent in use, not in design or implementation. So, why does conventional wisdom insist that software engineers focus primarily on the design and development of large-scale computing systems? In this collection of essays and articles, key members of Google’s Site Reliability Team explain how and why their commitment to the entire lifecycle has enabled the company to successfully build, deploy, monitor, and maintain some of the

largest software systems in the world. You’ll learn the principles and practices that enable Google engineers to make systems more scalable, reliable, and efficient—lessons directly applicable to your organization.
