Today the entire world is at our fingertips, not too long ago libraries, and the knowledge inside books were our only source. Now we can carry the entire library, and more in a tablet lighter, and smaller than a single book. We have the tendency to rely entirely on our computers as our only source of knowledge; we take for granted that there will be electrical power as needed, and spoiled by the ease and availability of Wi-Fi or Wi-MAX wherever we go connecting our devices to the world. While doing research in the field, we are sometimes at locations where power is at a premium, or does not exist at all; then you have questionable or unreliable cellphone service without reliable power those devices are useless, and inevitably start to shut down. In these situations its time to break out the pencil and paper. This book contains paranormal terminology from different fields, historical facts, people and events for research and educational purposes. ISR created this book as a handy quick pocket reference guide when doing research in the field. If you needed one book to take with you that would come in handy in the middle of nowhere, this would be that book.

In this revolutionary and highly original work, poet-scholar Glazier investigates the ways in which computer technology has influenced and transformed the writing and dissemination of poetry. In Digital Poetics, Loss Pequeño Glazier argues that the increase in computer technology and accessibility, specifically the World Wide Web, has created a new and viable place for the writing and dissemination of poetry. Glazier's work not only introduces the reader to the current state of electronic writing but also outlines the historical and technical contexts out of which electronic poetry has emerged and demonstrates some of the possibilities of the new medium. Glazier examines three principal forms of electronic textuality: hypertext, visual/kinetic text, and works in programmable media. He considers avant-garde poetics and its relationship to the on-line age, the relationship between web "pages" and book technology, and the way in which certain kinds of web constructions are in and of themselves a type of writing. With convincing alacrity, Glazier argues that the materiality of electronic writing has changed the idea of writing itself. He concludes that electronic space is the true home of poetry and, in the 20th century, has become the ultimate "space of poesis." Digital Poetics will attract a readership of scholars and students interested in contemporary creative writing and the potential of electronic media for imaginative expression.

Vol. 3: First Instance Marriage Nullity Acts. This book is an attempt to meet the needs of canonists and other church officials who need a guide in drawing up ecclesiastical documents which meet the requirements of canon law. Many canonists and other church officials, in the performance of their duties, draw up ecclesiastical documents such as official letters, decrees, rescripts, indults, &c. Such church documents must meet the requirements of canon law for drawing up ecclesiastical documents. Thus, this book is meant to serve as a guide to assist bishops, priests, deacons, religious, and lay church officials in the exercise of their ecclesial duties. It has several sample forms of church documents for use in chanceries, tribunals, religious houses, monasteries, nunneries, and parishes. Every effort has been made to ensure that the samples in this book meet the requirements of canon law. You will find this book very useful and handy as a reference guide, a blueprint, a resource material for drawing up ecclesiastical documents.

One of Canada's greatest inventors takes on his peers, with mixed results. Red Green's motto: Quando omni flunkus moritati (When all else fails, play dead) The author of How to Do Everything and Red Green's Beginner's Guide to Women has never been reluctant to take on enormously difficult jobs that are doomed to failure. This latest project has turned out to be perhaps his nearest thing to a triumph yet. In Woulda, Coulda, Shoulda, Red surveys, analyzes, critiques and in some cases tells you how to replicate at home the best Canadian inventions, from the Wonderbra to the hard-cup jockstrap, by way of insulin, the walkie-talkie, synchronised swimming and more world-changing innovations than you can wave a Canadarm at. And speaking of the Canadarm, Red shows how by simply combining common household items such as a cordless drill, metal tape measure, broomstick, ice tongs, bungee cord, fishing reel and, of course, the handiman's secret weapon--duct tape--you will in no time at all be lifting oranges out of the fruit bowl like a trained astronaut. Elsewhere, Red tells the little-known story of how the BlackBerry inspired a freelance piccolo player from the Possum Lake area to create a WhistleBerry communication device requiring no internet connection, wireless or electricity. He explains definitively the difference between the alkaline battery and Al Kaline, who played right field for the Detroit Tigers. And he reveals how Lodge Member Dennis Holmsworth's test-run of magnetic shoes along the underside of the Mercury Creek Railway Bridge literally came undone as a result of poor lace-tying skills. The illustrations are inimitably--because really, who else would want to?--the work of the author himself, relieved throughout with a large number of photographs in vivid black and white. An important contribution to the sesquicentennial celebrations, and an inspiration to the handiman and handiwoman to aim high, however badly they might miss, The Woulda Coulda Shoulda Guide to Canadian Inventions is a book no shed should be without.

This book provides a comprehensive introduction to X-ray and gamma-ray astronomy. The first part discusses the basic theoretical and observational topics related to black hole astrophysics; the optics and the detectors employed in X-ray and gamma-ray astronomy; and past, present, and future X-ray and gamma-ray missions. The second part then describes data reduction and analysis, the statistics used in X-ray and gamma-ray astronomy, and demonstrates how to write a successful proposal and a scientific paper. Data reduction in connection with specific X-ray and gamma-ray missions is covered in the appendices. Presenting the state of the art in X-ray and gamma-ray astronomy, this is both a valuable textbook for students and an important reference resource for researchers in the field.
