Samsung has again made its mark in the mobile field with the release of the latest Samsung Galaxy phones. The Samsung Galaxy S7 and S7 Edge were launched to the public in February of 2016 and are expected to be released for purchase by early March of the same year. The new models have received rave reviews and Samsung commended for maintaining the high quality and impressive features usually associated with the brand. Though the devices bear different names, the features they offer users are similar in nature. The S7 boasts a 5.1-inch screen with resolution of 2,560 by 1,440 pixels, a twelve-megapixel camera, IP68 water resistant rating, built-in storage capacity of up to 64GB and microSD card slot. The S7 Edge has a 3600mAh battery, the largest battery in the S line of phones, 5.5-inch screen with dual edge technology and a 12megapixel rear camera.

The Samsung S6 is an Android smartphone that is manufactured by Samsung Electronics. It was the successor to the Samsung Galaxy S5 and was released in April of 2015. The S6 featured many similarities to the past S5 phone but it also featured some departures from design approaches and the integration of new technologies which made the phone robust and a leader in the smart phone space. The HTC One M9 is another great Android smartphone that is manufactured by HTC and was released in April 2015. This is a third generation smart phone that is intended to be the successor to the M8 that was released in 2014. The HTC One M9 is similar to its predecessor only in that the body is wider and somewhat thicker. They have also made it more advanced and ready to compete in the current smart phone space. This book is intended to look at the differences and compare the specifications of the Samsung Galaxy-S6 and the HTC One-M9.

My Samsung Galaxy Note II John Wiley & Sons

Land Management is normally embedded in a complex legal context, which frequently consists of contradictory objectives, such as: strengthening of rural areas, satisfying the need for affordable living and commercial space, protecting environment and health, supporting

transport infrastructure development, and preserving the landscape. Land management can be understood as a process that comprises coordination of such activities while managing the use and the development of land resources. It can be constrained by the land use specifications resulting from spatial planning process. Along with this, the legal framework often contains generally formulated concepts and open standards, which provide a range of opportunities for realization while balancing the different interests. In this process it is important if and how both constraints and opportunities are recognised by the actors. In this volume this topic is examined from various aspects: first the problems in promoting mutual understanding between researchers and the general public, but also among scientists of different disciplines; second the success requirements of land management instruments as well as unfortunate experience caused by land use changes; third covering land management costs by absorbing value increase and other trade off aspects; and fourth supporting land management by providing geodata with low-cost methods.
