Nomophobia - the fear of having our phones taken from us - is taking over our lives. The smart devices are in our homes, carried room-to-room as if glued to the hands of our family members. They meander into the bathroom, the laundry room, the shop, the garage, backyard and even into the bedroom where the adults once had their "alone time." Our teenage children require them to either be under their pillows, by their pillows or within arm's reach at a nightstand in order to even sleep at night. The cell phone must be visible for them to take tests at school without withdrawal anxiety. The phones travel where we do - school, the office, the gym, so that we are in constant contact with the virtual world - other people who also have no real lives outside of their phone. They are ringing in churches, movie theaters, restaurants, concerts, funerals. Nothing says "goodbye" to the recently departed like your ring tone from Metallica's Hardwired. Welcome to the world of smart phone addiction.

The capacity of assistive technology (AT) to improve the lives of individuals with disabilities is well documented. Although promising, it is not without challenges. Historically, devices that provide mobility aids and physical supports dominate the world of AT; however, AT solution that specifically aims to address cognitive needs is scarce. The inequality of AT accessibility has left populations such as individuals with intellectual disability (ID) behind these potential benefits. This book presents six articles that highlight the need, impact, and possibilities of AT for people with ID. With the emphasis on the multidisciplinary perspectives, the objective of the book is to facilitate a better understanding of the needs of people with ID and the

potential AT influences. Ultimately, we hope this book will shed some lights on this important topic and provoke more discussions and efforts devoted to improving the lives of individuals with ID through the use of AT.
