A groundbreaking

study of visionary artist Hilma af Klint. When Swedish artist Hilma af Klint died in 1944 at the age of 81, she left behind more than a thousand paintings and works on paper that she kept largely private during her lifetime. Believing the world was not yet ready for her art, she stipulated that it should remain unseen for another 20 years. But only in recent decades has the public had a chance to reckon

with af Klint's radically abstract painting practice - one which predates the work of Vasily Kandinsky and other artists widely considered trailblazers of modernist abstraction. Accompanying the first major survey exhibition of the artist's work in the United States, Hilma af Klint represents her groundbreaking painting series while expanding recent scholarship to present the fullest picture yet of the artist's life and work. Essays explore the social, intellectual, and artistic milieu of af Klint's 1906 break with figuration and her subsequent development, placing her in the context of Swedish modernism and folk art traditions, contemporary scientific discoveries, and spiritualist and occult movements. A roundtable discussion among contemporary artists, scholars, and curators considers af Klint's sources and relevance to art in the 21st century. The volume also delves into her unrealized plans for a spiral-shaped temple in which to display her art - a wish that finds a fortuitous answer in the Guggenheim Museum's rotunda, the site of the forthcoming exhibition.

In 2002 a milestone occurred in the electronics industry. The market capitalization of Sony fell below that of Samsung for the first time. Why did the performance of Sony, which once dominated the global electronics

industry, drop so rapidly while Samsung emerged from nowhere? This fascinating book from leading business professor Sea- Jin Chang compares key strategic decisions by Sony and Samsung with respect to technology, marketing, organizational infrastructure, and globalization strategies from the mid-1990s to 2006. One of the key findings drawn from this book is that the performance differences between Sony	and Samsung cannot be attributed solely to their strategies. Rather, organizational processes and executive leadership also contributed significantly to their performances. The author examines these contributions in detail and in doing so reveals much about each company's approach to global expansion and their key factors for success and failure. Sony vs. Samsung examines the challenges that Samsung faces,	despite its remarkable performance, while evaluating Sony's potential, despite its current struggles. The conclusions provide useful insights for all companies involved in global competitive markets. <u>Beyond Sound</u> Guggenheim Museum A comprehensive text on how to develop, market, and sell your own product lines as independent labels or brands. This book offers a helpful starting point in the scattered, rich, and complex body of literature on Mobile Information Retrieval (Mobile IR), reviewing more than 200 papers in nine chapters. Highlighting the most interesting and influential contributions that have appeared in recent years, it particularly focuses on both user interaction and techniques for the perception and use of context, which, taken together, shape much of today's research on Mobile IR. The book starts by addressing the differences between IR and Mobile IR, while also reviewing the foundations of Mobile IR research. It then examines the different kinds of documents, users, and information needs that can be found in Mobile IR, and which set it apart from standard IR. Next, it discusses the two important issues of user interfaces and context-awareness. In closing, it covers issues related to the evaluation of Mobile IR applications. Overall, the book offers a valuable tool, helping new and veteran researchers alike to navigate this exciting and highly dynamic area of research.

Stepping Up to the Challenge provides readers with a view of the changing and emerging roles of electronic books in higher education. The three main sections contain contributions by experts in

It is meant for the musician who</p>	<p>wants to explore new sounds for improvisation or composition. The book reduces note relationships down to two hundred and</p>

twenty prime forms. Endless combinations of notes can be derived from these prime forms which are commonly referred to as pitch class sets. The various melodic and harmonic relationships of these pitch class sets are listed to help a musician locate and utilize these relationships within their own playing. Along with each pitch class set is a listing of possible related jazz chords. Where appropriate a listing of all

three and four note chords can be found to aid in creating varied and unique harmonic palettes, as well as three, four, six and eight note subset relationships to help in exploring subset based musical ideas. Jazz musicians will find this book user friendly because all relationships are listed as both pitch names and scale degrees. Set theory students will find each pitch class set is also expressed in its prime form. An index containing a

simplified set list is also included to help in locating a prime form's scales from any note combination. There is also a brief theory section exploring some of the uses of the information presented. Further books will explore these theoretical relationships in depth. Cherry Lake "Artificial intelligence (AI) and big data promise to help reshape the global order. For

decades, most political observers believed that liberal democracy offered the only plausible future pathways for big, industrially sophisticated countries to make their citizens rich. Now, by allowing governments to monitor, understand, and control their citizens far more effectively than ever before, AI offers a plausible way for big,

economically advanced countries to make their citizens rich while maintaining control over them--the first since the end of the Cold War. That may help fuel and shape renewed international competition between types of political regimes that are all becoming more "digital." Just as competition between liberal democratic, fascist, and communist social systems

<p>defined much of the twentieth century, how may the struggle between digital liberal democracy and digital authoritarianism define and shape the twenty-first?
