**Sailing Made Easy** Benjamin Cummings  
When in 2013 he first published a report on the active presence of Al-Qaeda in South Africa, all hell broke loose for investigative reporter De Wet Potgieter. He was forced to retract before a second, substantiating article could be published. Then the massacre at Westgate Mall hit Nairobi, which made the involvement of the so-called

White Widow - operating on a legitimate but illegally acquired South African passport - front-page news. Suddenly the world's media was beating a path to Potgieter's door. Now, for the first time, he tells the full unsettling story of Al-Qaeda's presence in this country. Not only is the veil lifted from this mysterious British woman, but the identity of another is disclosed: an Afrikaans-speaking counter-terrorist operative known as the Black Widow. The book shows how, taking advantage of corrupt state machinery, Al-Qaeda factions launch attacks in other countries. It discloses the location of a terrorist training camp in the Karoo and reveals disturbing details of the support they receive from various local extremist groups. Based on investigations spanning two years, Black Widow White Widow paints a frightening picture of the all too real possibility of future attacks from, or on, South African soil. Sailing Made Easy is the first step

in a voyage that will last you the rest of your life. It is a gift from a group of dedicated sailing professionals who have committed their lives to sharing their art, their skill, and their passion for this wonderful activity. This book, which Sailing Magazine called "best in class" upon its release in 2010, is the most comprehensive education and boating safety learn-to-sail guide to date. It is also the official textbook for the ASA Basic Keelboat Standard (ASA 101). Incorporated in the textbook are useful illustrations and exceptional photographs of complex sailing concepts. The text's most distinguishing feature is its user friendly "spreads" in which instructional topics are self-contained on opposing pages throughout the book. There are also chapter end quizzes and a glossary to help those new to sailing to navigate their way through the extensive nautical terminology.

Urban Events, Place Branding and Promotion explores the phenomenon of place event marketing, examining the ways in which events are used to brand and disseminate information about a place. It provides a novel contribution to the

---

literature, capturing the growing interest in place promotion, and offers in-depth insights on the role of events. With a focus on urban locations, this book defines the scope and concept of place event marketing. It demonstrates that different kinds of events, for leisure and business, can be used to successfully develop, promote and brand different types of places. Individual chapters written by a variety of leading academics explore how various public and non-governmental institutions that deal with promotion and marketing communications of places can implement event marketing activities and how such institutions organize, co-organize and sponsor different events. The effects of event marketing activities on urban place promotion and branding are thoroughly explored through a variety of international empirical case studies. This will be of great interest to upper-level students and researchers in events marketing and management, tourism and the broader field of urban geography. The concluding chapter also proposes future research directions.

In the 20 years since the publication of the author ’ s multi-contributor volume on defoaming, a vast amount of new work has been

published and many new insights have been revealed. A cohesive, single-authored book, *The Science of Defoaming: Theory, Experiment and Applications* provides comprehensive coverage of the topic. It describes the mode of action of antifoams, presenting the relevant theory and the supporting experimental evidence.

Beginning with an introductory chapter that discusses the intrinsic properties of foam, the book then describes experimental methods for measuring foam properties important for studying antifoam action and techniques used in establishing the mode of action of antifoams. Since most commercially effective antifoams are oil based, a chapter is devoted to the entry and spreading behavior of oils and the role of thin film forces in determining that behavior. The book reviews the mode of action of antifoams, including theories of antifoam mechanisms and

---

the role of bridging foam films by particles and oil drops. It also addresses issues related to the effect of antifoam concentration on foam formation by air entrainment and the process of deactivation of mixed oil – particle antifoams during dispersal and foam generation. For applications where chemical antifoam use is unacceptable, the text examines mechanical means of defoaming, such as the use of rotary devices and ultrasound. The final chapters consider the application of defoaming in radically different contexts including waterborne latex paints and varnishes, machine washing of textiles, gas – oil separation in crude oil production, and cardiopulmonary bypass surgery. Focusing on the basic science of defoaming, this book presents a balanced view, which also addresses the challenges that may arise for these specific defoaming applications.
