You might have read him in class, but the Victorians read Charles Dickens like we watch *Melrose Place*, and *The Friendly Dickens* will show you why. It is the ultimate pop reference to the Dickensian world of shrouded sex and ostentatious death, a book that will have you running in delight to dust off your Dickens. Norrie Epstein--whose *The Friendly Shakespeare* was called by *The New York Times* "spirited, informative and provocative"--opens up Dickens's life and times in all its squalor and glory, including his rise to greatness and occasional lapses from grace. She

considers his works, major and minor, in decided lively fashion, not just reading, but reading between the lines:* Was Oliver Twist's Fagin a pederast?* What made A Christmas Carol's Tiny Tim so darn tiny?* How many of Dickens's child characters met an untimely end? (Hint: plenty.)Full of humor, skepticism, and expert opinions, with eye-catching illustrations, plenty of quotes, and sidebars on nearly every page, you will quickly become a Dickens authority--even if you've never read a word.

Regenerative medicine (RM) is a rapidly expanding topic within orthopedic and spine surgery, sports medicine and rehabilitation medicine. In the last ten years, regenerative medicine has emerged from the fringes as a complement and challenge to evidence-based medicine. Both clinicians and patients alike are eager to be able to offer and receive treatments that

don't just surgically replace or clean old joints or inject away inflammation or work as a stop-gap measure.

Regenerative medicine encompasses everything from the use of stem cells and platelet-rich plasma (PRP) to prolotherapy, viscosupplementation and beyond.

This book will provide healthcare practitioners dealing with spine and joint pain with the most current, up-to-date evidence-based information about which treatments work, which treatments don't, and which are on the horizon as potential game changers.

Chapters are arranged in a consistent format and cover the spine, shoulder, elbow, hand and wrist, hip, knee, and foot and ankle, providing a thorough, top-to-bottom approach. A concluding chapter discusses current and future directions and applications of RM over the next decade or two. Timely and forward-thinking, *Regenerative Medicine for Spine and Joint Pain* will be a concise and practical resource for orthopedists, spine surgeons, sports medicine specialists, physical therapists and rehabilitation specialists, and primary care providers looking to

**Designing Information Spaces:
The Social Navigation Approach**

Prentice Hall

In the 21st century, digital tools enable information to be generated faster and in greater profusion than ever before, to the point where its extent and value are literally beyond imagining. Such quantities can only be meaningfully addressed using more digital tools, and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching, and demands a

response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in which learning opportunities are offered, but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists, to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology. Traditional notions of literacy need to be challenged, and new literacies, including information literacy and IT literacy, need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate, and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky, provides the foreword. The book is in two parts: In Part 1, Literacies in the Digital Age, the contributors analyse how digital

technologies have enabled transformative change in the ways in which learning can be constructed, and discuss the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, *Enabling and Supporting Digital Literacies*, the contributors go on to consider the ways in which digital literacies can be made available to learners, and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. *Readership*: This book takes the issues raised in the successful *Information and IT Literacy*, also co-edited by Allan Martin, into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age. Lonely Planet Colorado BookRix Based on years of market research and thousands of e-customers, this timely book addresses: targeting emerging e-customer segments; building and sustaining customer loyalty; acquiring new customers; respecting consumers' privacy; developing sales and distribution channels; breaking

through to new online markets;
and understanding consumer
versus business markets."--BOOK
JACKET.

**The True Story of the
Bildenberg Group** Elsevier

This volume contains ten
papers, by many prominent
authors, examining antitrust
issues of current interest.
The first paper summarizes
the other papers and presents
original research on the
meaning of consumer welfare
and the sources of buyer
power. The next five articles
evaluate older antitrust
cases to determine whether

the decisions reached, the
relief ordered, or both,
enhanced consumer welfare. The
seventh paper describes a new
measure of efficiency that
gives greater weight to
consumer harm and applies it
to a recent merger. The next
paper explains a new way in
which vertical foreclosure can
enhance the market power of an
upstream supplier. The ninth
article refines an innovative
technique for identifying
substitutes among a set of
differentiated products. The
tenth paper confronts a
contentious policy issue - the

treatment of patent settlements in which the patent holder pays the challenger to exit the market - and concludes that they should be per se illegal.

New Paradigm in Macroeconomics

OUP Oxford
Social navigation is an emerging field which examines how we navigate information or locate services in both real and virtual environments and how we interact with and use others to find our way in information spaces. It has led to new ways of thinking about how we design information spaces and how we address usability issues, particularly in collaborative, web-based systems. This book follows on from Munro et al, Social Navigation of Information Space, which was the first major work in this field. It

provides a similar broad overview of the field, but is much more practical in focus.

Modern mainstream economics is attracting an increasing number of critics of its high degree of abstraction and lack of relevance to economic reality. Economists are calling for a better reflection of the reality of imperfect information, the role of banks and credit markets, the mechanisms of economic growth, the role of institutions and the possibility that markets may not clear. While it is one thing to find flaws in current mainstream economics, it is another to offer

an alternative paradigm which, can explain as much as the old, but can also account for the many 'anomalies'. That is what this book attempts. Since one of the biggest empirical challenges to the 'old' paradigm has been raised by the second largest economy in the world - Japan - this book puts the proposed 'new paradigm' to the severe test of the Japanese macroeconomic reality.

Regenerative Medicine for Spine and Joint Pain Macmillan
Although semiotics has, in one guise or another, flourished uninterruptedly since pre Socratic times in the West, and important semiotic themes have emerged and developed independently in both the Brahmanic and Buddhist traditions, semiotics as an organized undertaking began to bloom only in the 1960s. Workshops materialized, with a perhaps surprising spontaneity, over much of Europe—Eastern and Western and in North America.

Thereafter, others quickly surfaced almost everywhere over the literate globe. Different places strategically allied themselves with different legacies, but all had a common thrust: to aim at a general theory of signs, by way of a description of different sign systems, their comparative analysis, and their classification. More or less permanent confederations were forged with the most diverse academic disciplines, and amazingly varied frameworks were devised—suited to the needs of the times and
